Microsoft said the Bing tool is now more powerful and flexible, especially in image search when it adds its search engine to a ' *Image Match* ' function button.

Accordingly, users can paste or drag images from the computer, the image URL into the ' *Image Match* ' box and Bing will produce search results with many identical images but with different sizes and resolutions. each other so that users can choose the best photo.

The same feature has been equipped by Google for Google Search around June 2011. In other words, Bing was two and a half years slower than its rivals, but it was still better anyway. Now Bing is increasingly appreciated by consumers and Microsoft is also "*running*" to have its search engine reach Google Search's reach.
