

Microsoft is starting to push the rollout of a 64-bit version of OneDrive to Windows 10 users

OneDrive is built into Windows, and Microsoft has confirmed that it will silently update the program to 64-bit if the user's PC meets the requirements.

In early April, Microsoft officially confirmed its plan to provide a 64-bit version for OneDrive to improve the overall user experience of this important software on Windows 10.

According to the announcement posted on the Microsoft admin center, the overall 64-bit OneDrive availability has been delayed until mid-April, and rollout is now scheduled to be completed by mid-May (this weekend).

The new 64-bit version of OneDrive is designed for all types of users using school, home and business accounts. This will essentially be a comprehensive addition to the existing 32-bit version, in terms of both functionality and stability, significantly improving the user experience. If you're running on a 32-bit or 64-bit version of Windows, you can continue to use the existing OneDrive program in 32-bit format.

However, if the work requirement makes you often work with large files, you have the need to transfer more files, and especially your PC is running a 64-bit version of Windows 10, then the client The brand new 64-bit OneDrive will be a very priority choice. Overall, the 64-bit OneDrive app will work more efficiently and can improve overall sync over the 32-bit version.

OneDrive is built into Windows, and Microsoft has confirmed that it will silently update the program to 64-bit if the user's PC meets the requirements.

You can verify your device configuration by navigating to Settings> System> About. In the 'Device Specifications' section, find and confirm whether the processor you're using is 32-bit or 64-bit.

Once upgraded, the OneDrive app will be significantly more efficient on supported systems, and have access to greater amounts of resources. This will help speed up the backup and sync process, especially when you have a large number of files.

As planned, OneDrive for Android will also receive more improvements this month. In addition to OneDrive, other Microsoft 365 products like Microsoft Teams will also receive notable feature updates.
