

# Microsoft launched Sharepoint Spaces support mixed reality

Microsoft has unveiled their mixed reality vision when launching SharePoint Spaces, enabling businesses to create a world of great experience, viewing SharePoint documents and documents.

Microsoft has unveiled their mixed reality vision when launching SharePoint Spaces, enabling businesses to create a world of great experience, viewing SharePoint documents and documents.

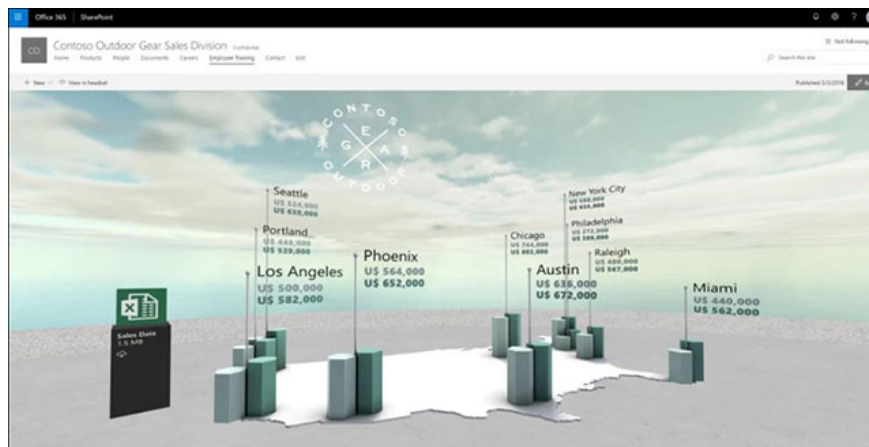

This information was revealed by Microsoft vice president Jeff Teper on the SharePoint Conference North American event stage, held in Las Vegas from 21 to 23 May.

SharePoint is a set of storage, collaboration and content management tools for businesses. Microsoft said there are currently 400,000 businesses using SharePoint, up nearly 100% from the same period last year.

Microsoft is currently investing heavily in mixed reality technologies and software. At the annual Build event this month, they also unveiled two new apps for HoloLens.

## Virtual reality in the working environment

With SharePoint Spaces, users can create, view mixed reality on any device or browser. Instead of using a traditional monitor with a mouse and keyboard, just use a headset with support from the motion controller and interact with the content from multiple angles. There is no need for a headset because you can view the standard web interface on your computer or phone.

Data is visualized in a mixed real environment

Microsoft has offered many instances of using SharePoint Spaces such as walking on the corporate campus without going out or the development team to see the 3D prototype of the product, the business team can view the data in Excel with pictures photos are less boring.

Microsoft also offers many innovations for mixed reality to average users like HoloLens certification for creative organizations to keep up with the pace of mixed reality.

Although companies can write mixed practical applications using Microsoft's software development kit, the technology giant still invests resources to help companies need external support. .

SharePoint Spaces also aims to solve a problem: building a mixed reality experience can be very expensive and complex, but now has a simple point and click interface with many templates. Users can add files to SharePoint to turn into 3D images quickly.

*'With SharePoint, people can interact with objects that are too big or too animated in the real world or two-dimensional world , ' Microsoft said. SharePoint Spaces will be included in the Office 365 subscription, you can join the Early Access program from today. <https://aka.ms/sharepoint-spaces>*
