

Microsoft launched Windows 10 S 'massive' investment in education

Windows 10 S is a newly released version of Microsoft, which enhances productivity, pays special attention to education, enhances the experience for teachers, students and students.

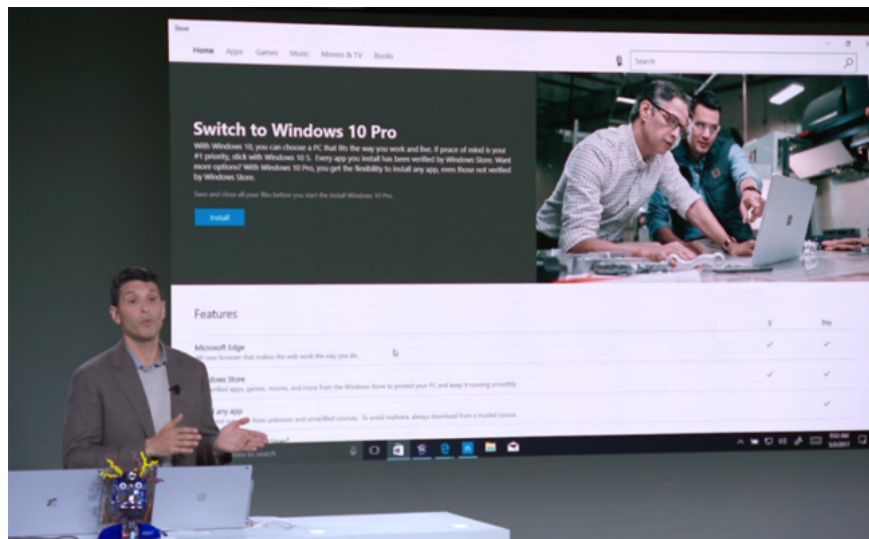

Recently, Microsoft has officially "released" a completely new version of Windows 10 S. operating system, this version was commented to be quite neat and simple to use, especially to mention the ability to High security and optimal performance for users. In addition, Microsoft focuses on education in this version, enhancing the experience for teachers, students and students.

It can be said that the performance and operation of Windows 10 S operating system is very rich, when it can be compatible on all Windows hardware even with the Surface Book. Windows 10 S UWP applications are all downloaded from the Windows Store so users will not need to worry about applications that affect the computer or not. On the other hand, this also ensures much greater security when used in all schools, compared to older x86 applications.

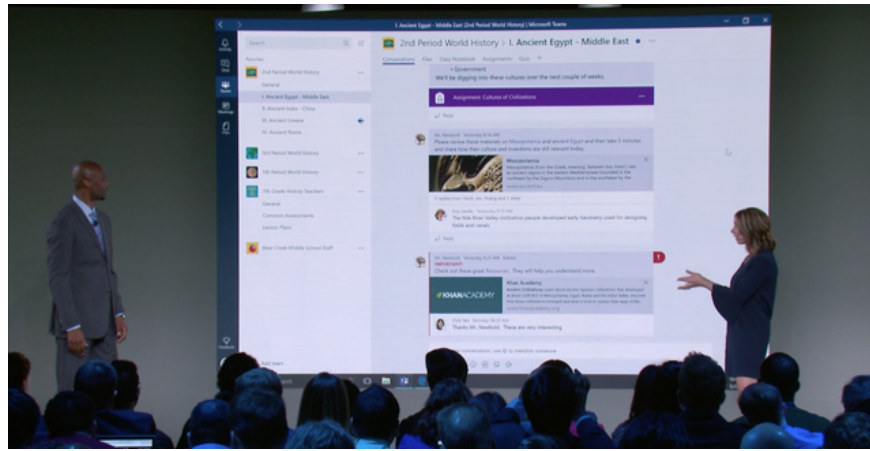

As mentioned, Windows 10 S is specifically targeted at the education industry, providing free for schools running Windows 10 Pro. Another object, if you want to upgrade from Windows Pro version to Windows 10 S operating system, will need a price of 50 USD. And during use, you can still switch between these two operating systems.

Improving the user experience on Windows 10 S for students and students starts right from the login. Learners can login to Windows 10 S faster with only 15 seconds. Many tools and learning applications are also integrated in this version to serve teachers and students. Office 365 for education software suite offers tools for users to unleash content creation during group study or self-study. Or teachers can manage students' computers, improve the learning process of students and students, such as pre-installing software on the operating system with USB.

In addition, to increase exchanges and interaction between students and teachers, the Microsoft Teams office application helps improve team work processes more effectively.

A significant change in Windows 10 S is the combination of the famous Minecraft intellectual game into education. Accordingly, Microsoft is gradually improving education version of Education Edition of Minecraft game, in the future users can write JavaScript code right on the game. And to encourage users of Windows 10 S, Microsoft will give 1 year free version of Minecraft and Office 365 for Education with Microsoft Teams.

In addition to applications and games for education, Microsoft also supports 3D and VR technology in teaching when bringing Acer laptops and glasses of VR. All lessons are now more extensive than before, when teachers, students and students can get close to illustrations, easily explore all areas from science, life.

It can be said, Microsoft invested heavily in education in this new version of Windows 10 S. The price of the lowest Windows 10 S devices with \$ 189, due to be released this summer, promises to be a serious competitor to Chromebook products.
