

# Microsoft launches the Covid-19 translation tracker and update for desktops and smartphones

The recently released Covid-19 translation tracker is available for users on desktop and mobile devices.

Microsoft has released the Covid-19 tracker for desktop and mobile devices, right on Bing and the News app. This tracker will aggregate information related to Covid-19 translation so that users can get the most out of it.

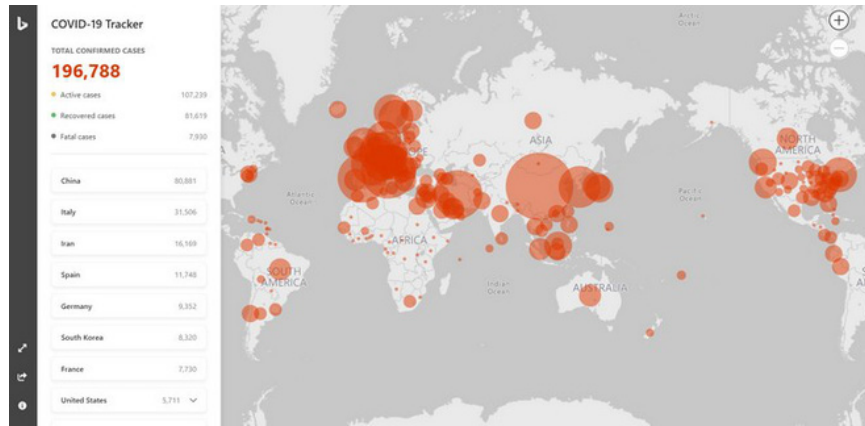

Users can try to go to "[bing.com/covid](https://bing.com/covid)" to see the map of Covid-19 infection in the world, along with the statistics of positive cases, recovery and death. be confirm.

You can also view statistics for each country and zoom in to see updates for a given area.

Although similar disease tracking services have been around for a long time, Microsoft is trying to turn this tracker into the most intuitive Covid-19 pandemic monitoring center with news and video.

Microsoft said it took data from reputable sources such as CDC, WHO, ECDC and Wikipedia and always updated information continuously.

Sentiment tracking is also optimized for the display interface, especially mobile devices.

Microsoft is one of the technology companies seriously affected by the Covid-19 epidemic. Recently, the company had to cancel a number of technology events including a BUILD developer conference.

This is Microsoft's biggest tech event of the year. This is also where they often share new plans with developers and reveal new improvements and changes in software, including Windows 10. However, this year, Microsoft is expected to host a live event. gland to prevent the spread of disease.

Of course, not only Microsoft but many other companies such as Google, Apple and Facebook canceled technology events this year and switched to online organizations to ensure safety.
