

# Microsoft Office 2011 with many attractive features

Microsoft Office 2011, the new version for MacOS will be officially released in the fourth quarter of 2010 with many exciting new enhancements.

**Microsoft Office 2011, the new version for MacOS will be officially released in the fourth quarter of 2010 with many exciting new enhancements. First of all, it is the elimination of Entourage and Outlook appears instead** . The software interface is also changed, more convenient for users, especially those who are familiar with office for Windows.

*Some new changes for Microsoft Office 2011 are :*

\* **Cloud computing** : with the 2011 version, you will easily work with data stored on the Web, office files are left on shared servers, SkyDrive or SharePoint. With Microsoft Office Web Apps, you will easily access, repair and update your data from any internet-connected computer, regardless of where you are.

\* **Collaborative environment** : New feature allows 2 or more people to work at the same time on the same text file. For example, in Word, you can edit a paragraph above, while others are manipulating the text below. Names of people who are accessing the same file will be displayed in the lower left corner.

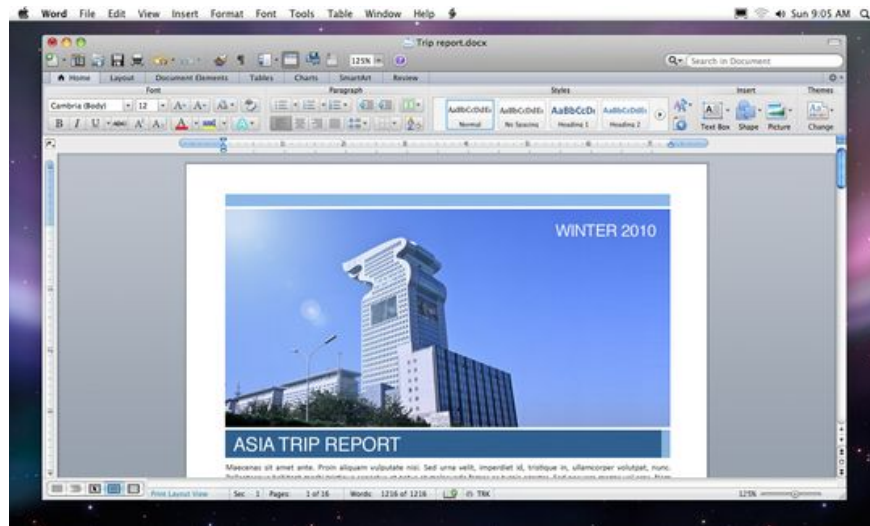

\* **Compatibility** : Of course the new version will be compatible with what is available. In addition, Office 2011 will be compatible with Office 2010 for windows, so you will be more convenient to share files.

*There are also small details but also very interesting :*

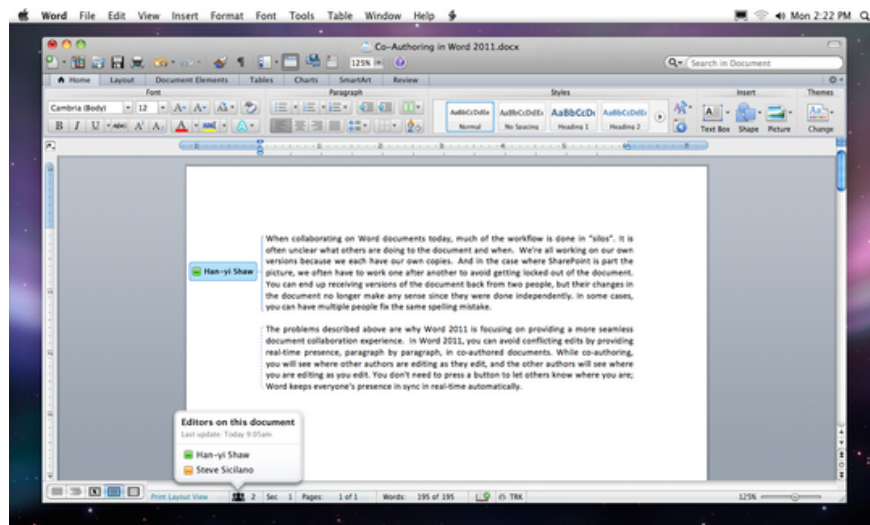

\* Entourage has been removed and replaced by Outlook for MacOS. Especially you can import data from PST file.

\* Office 2011 is rewritten on Cocoa platform, fully compatible with Snow Leopard. Stable and better running.

\* Office's special "ribbon" bar has appeared on this 2011 version, making it more convenient for users to operate.

The ribbon bar featured Microsoft Office

Many people work on an office file
