

Microsoft released 14393.1613 cumulative update for Windows 10 Anniversary users

Yesterday, Microsoft released a cumulative update build 14393.1613 for Windows 10 Anniversary users. This update does not include any new features, but it contains many useful fixes.

Yesterday, Microsoft released a cumulative update build 14393.1613 for Windows 10 Anniversary users. This update does not include any new features, but it contains many fixes. Here are the changes in this update:

1. Solve the problem in which a black screen appears when launching an application on Citrix XenApp deployed from Windows Server 2016.
2. Fixed an issue where User Account Control (UAC) sometimes appears under other open windows.
3. Solve the problem in the data collection event that causes interruptions with % icons in the user login section (ID 4624) from other Domain Controllers (DCs).
4. Fix the problem where the PowerShell Add-HgsAttestationTpmHost command fails to find the Endorsement Key Certificate for the system even if the certificate exists.
5. Solve the problem, in which, the Encrypted Hard Drive device does not automatically unlock when the system starts.
6. Solve the problem, in which AppLocker crashes when selecting an account.
7. Troubleshoot third-party directory structures that cause Disk Cleanup to make the boot hard drive inaccessible.
8. Solve the problem in which, asynchronous access in NtfsQueryLinksInfo leads to system crashes.
9. Solve problems wherein, large I / O flushes may cause errors.
10. Solving the reliability problem occurs when users give a wrong number to a smart card card prompt.
11. Solve the problem by increasing the time outside the window when starting Docker for Windows to avoid errors 0x5b4.
12. Fix an issue with Azure Multi Factor Authentication (MFA) when the ADFX server is configured to use HTTP Proxy.
13. Solve the problem in which IP address calling is not recorded in the Security Event of ADFS 4.0 and Windows Server 2016 RS1 ADFS servers. This problem occurs even after activating Success Audits and Failure Audits.
14. Fix the problem in which the computer account loses domain membership with error 1789. The same problem occurs while the user password cannot be changed with the 0xc0000206 error.
15. Fix the problem that after restarting the server, backup storage does not automatically resume the process as expected. Besides, Storage Replication service does not work after restarting.
16. Solve the problem that after uninstalling SMBv1, if you set the SPN authentication level to 2, when accessing a remote UNC shared item (eg C \$), the request will fail with the message newspaper STATUS_ACCESS_DENIED.
17. - Fix an issue where Remote Desktop clients cannot connect or disconnect continuously while trying to use the RD Gateway.

With issues related to Update History, WSUS server, Microsoft will also provide updates as soon as possible.

Note: This update is only available for Windows 10 PC

1. Quickly download the August 8 cumulative update of Windows 10 brothers
2. How to turn off Automatic Update (update) on Windows 10

This update will be downloaded and installed automatically from Windows Update. Visit the Microsoft Update Catalog website to download the cumulative update build 14393.1613.
