

# Microsoft released the Windows 10 build update 16299.402 to fix many bugs, with offline installer

Microsoft has just released a cumulative update with code KB4093105 for Windows 10 Fall Creators Update, which has an offline installer.

Microsoft has just released a cumulative update with code KB4093105 for Windows 10 Fall Creators Update, which has an offline installer. This is a big update, comes with a long list of fixes and improvements for the operating system.

Users can view details of the improvements and bug fixes of this update in the website below:

1. <https://support.microsoft.com/en-my/help/4093105/windows-10-update-kb4093105>

Probably because Microsoft is focusing on the upcoming version later this month, there are no new features added to this update.

When updating with Windows Update, there may be a problem with error code 0x80070643 so users should use the offline installer to install manually. In addition, with the offline installer, the download and installation time is faster and more stable than the live update via Windows Update.

With the offline installer, you can install a Windows 10 update without the Internet.
