

Microsoft silently updated one of the most requested features on Windows 10

Design volume slider has just appeared on the latest updated version of Windows 10.

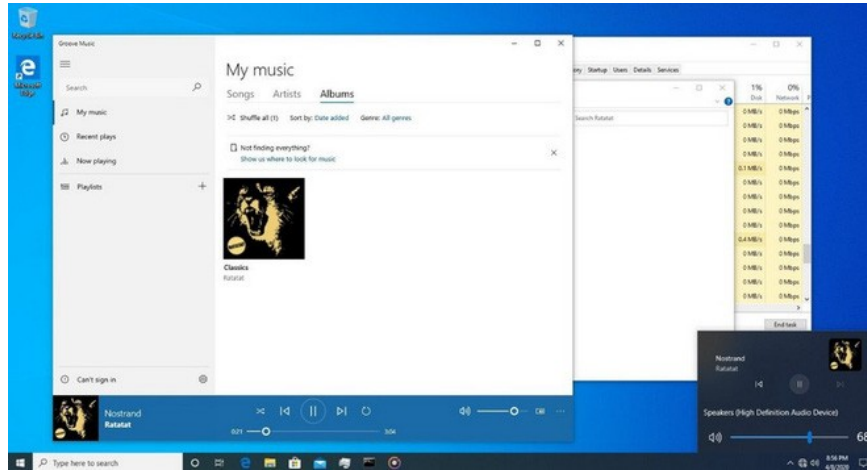

For most long-term Windows 10 users, there are some features they have been asking for a long time, but Microsoft has yet to respond, such as a tab in File Explorer or a new volume slider.

However, the fact that Microsoft is still quietly developing the features that many users require. One of those features has just appeared in build 19603 on Windows 10.

Specifically, Microsoft has brought a new flyout design for the volume adjustment slider. Now, users can control the music right in the volume control interface.

Although Microsoft has not revealed this new feature, it is quite surprising that this is one of the most expected features on Windows 10. Perhaps because Microsoft is still continuing to improve the feature, it is not official. Share to users or take notes in recent builds.

According to Twitter account Albacore, the design of the volume control slider is heavily inspired by Windows 10X. And this is a welcome thing when Windows 10X has received quite a lot of praise from the tech world for its simplicity and compactness.

Of course there is no guarantee that the new interface of the volume bar will appear on the final Windows 10 update, because this is just a development stage in the past, Microsoft has canceled many features. in a moment just because it is not possible to complete or change the plan, such as Sets.
