

# Microsoft stopped supporting Google Search application on Windows Phone

Today, Microsoft has officially released the Google Search application to stop working on Windows Phone devices. When the user accesses the search on the application, a Connection failed message. Try again later will appear.

Today, Microsoft has officially released the Google Search application to stop working on Windows Phone devices. When the user accesses the search on the application, a "Connection failed. Try again later" message will appear.

Currently, people have not found a way to remedy this situation and will probably never. So it can be said that this move of Microsoft is the end of Google applications on Windows Phone, the operating system has very few users.

In fact, Google has always "neglected" Windows Phone and Windows 10 Mobile when refusing to bring many popular applications like Gmail, Google Maps . to these platforms.

Of course, Windows Phone users can still use Microsoft Edge browser to search the web. But Microsoft also only supports security updates of this mobile platform until mid-2019, after which Windows Phone will officially be declared dead. Meanwhile, Windows Phone users will have to switch to iOS or Android.

After Google Search, Microsoft will stop the operation of many other applications on Windows Phone.
