

Microsoft suddenly launched Surface Duo, a dual-screen phone running Android

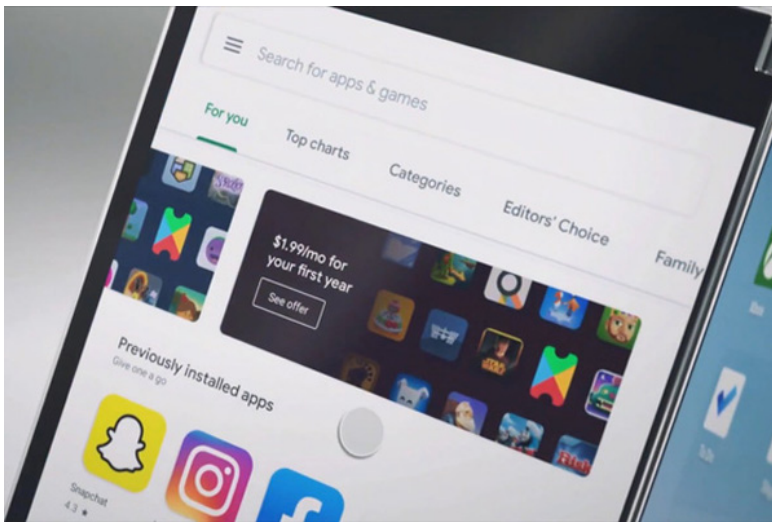

The first special feature of this smartphoen is that it does not run Windows 10 Mobile but runs the Google - Android player operating system.

At the recent event, Microsoft surprised many people by officially announcing the first smartphone with the Surface brand called Surface Duo.

The first special feature of this smartphone is that it does not run Windows 10 Mobile but runs the operating system of rival Google - Android.

Microsoft has partnered with Google to give its best children the best Android experience.

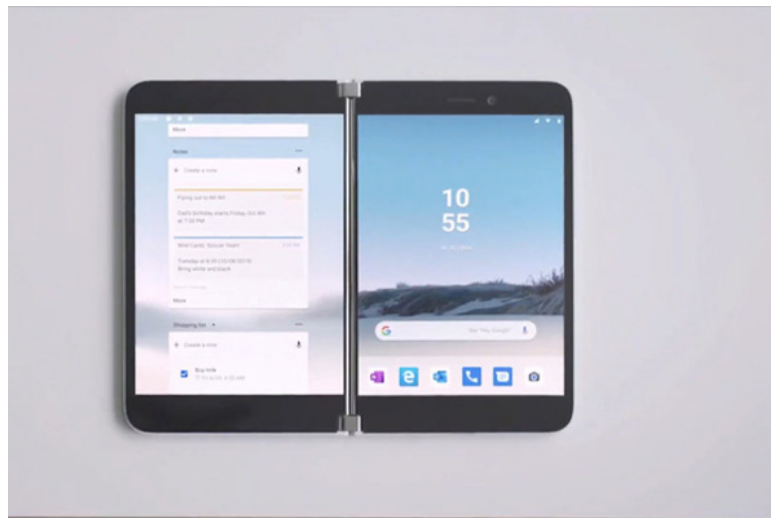

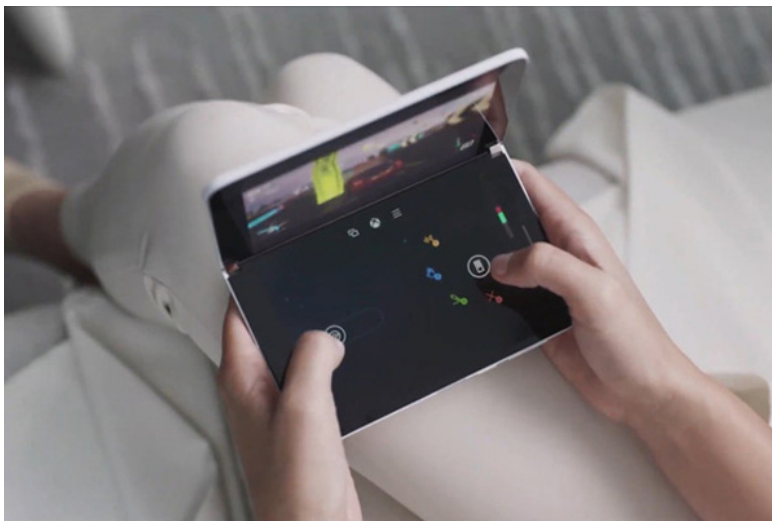

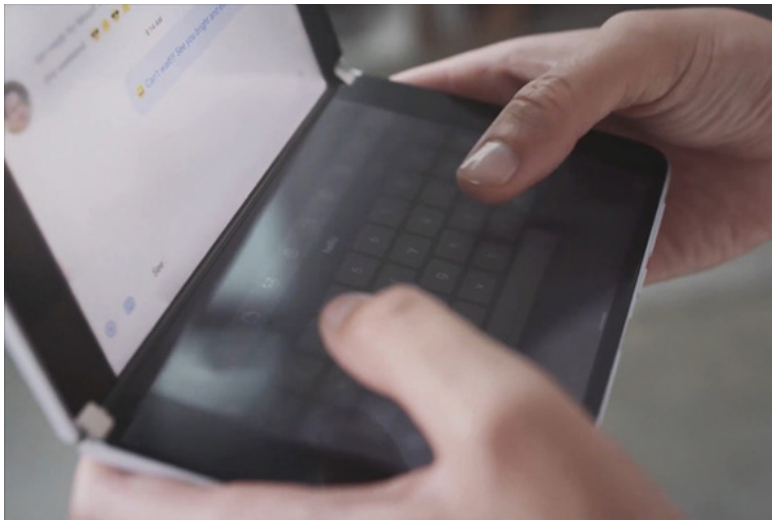

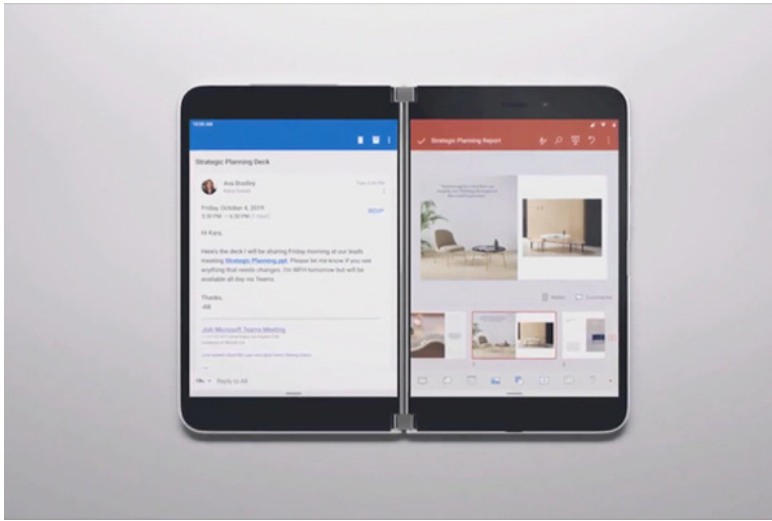

The second special feature of the Surface Duo is its ability to work. The Surface Duo is equipped with two 5.6-inch screens, connected by a hinge that allows users to rotate 360 degrees and open completely like a miniature tablet with 8.3 inch display space.

Although Microsoft has not announced details, it is likely that Surface Duo will be able to multitask two applications at the same time. When panning the device, the second screen becomes a keyboard or gamepad. The Surface Duo also supports the pen, but there may not be a slot to insert the pen directly.

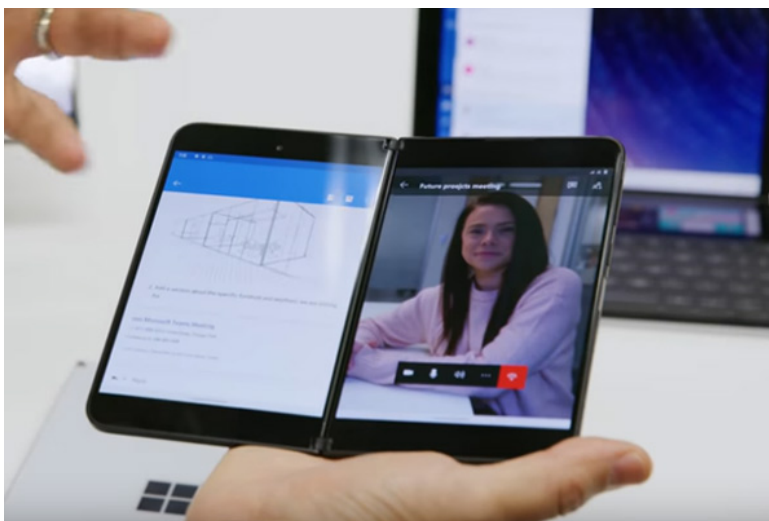

It was not until the end of 2020 that the Duo Duo was ready to hit shelves. Because Microsoft had time to work with developers to create the best polymorphic experience, Microsoft decided to announce Surface Duo up to a year earlier than the time of sale. The price of Surface Duo has not been announced.

1. Watch the video of opening Xiaomi Mi Mix Alpha box, quality from machine to boxed
2. Xiaomi officially launched the Redmi 8A, 5000 mAh battery, USB Type-C, priced at 2,150,000 VND
3. Google launches Android 10 Go Edition, improving speed and increasing security for low-cost phones
