

Microsoft updates Edge browser with ChatGPT-like features

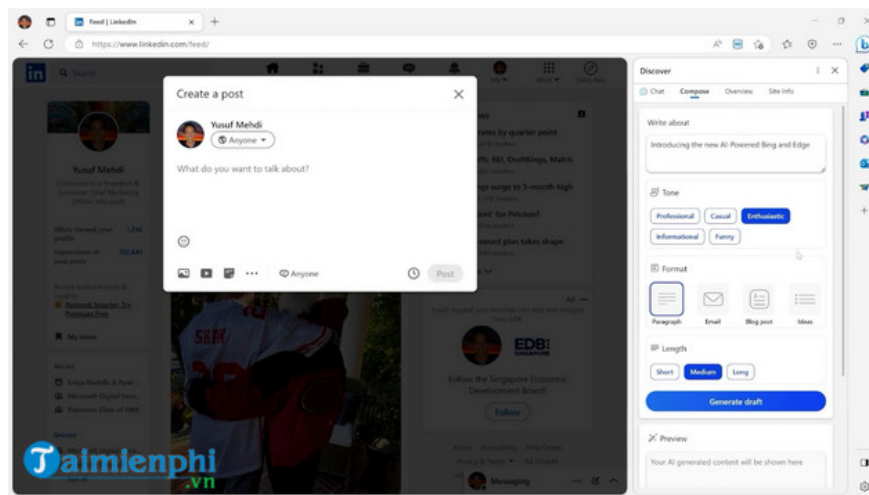

After integrating AI technology into the Bing smart search engine, Microsoft continues to update the Edge browser with a new AI-powered copilot feature. With the ability to look up using artificial intelligence, Microsoft Edge can provide maximum support for users in daily tasks.

Specifically, Microsoft has updated the AI capabilities and interface with a new sidebar for the Edge web browser, and added two new features: Chat and Compose. Users can use the chat feature to ask questions and receive answers similar to ChatGPT.

Meanwhile, the Edit option will help users write a new piece of text or content using annotations or suggestions. This AI "assistant" can synthesize key points from documents, compare content, and even compose social media posts with the tone, format, and length of the post fine-tuned to the user's liking. use.

Built with the help of OpenAI, the new AI model called Prometheus has been updated on both Bing and Edge. Although developed from ChatGPT conversational AI, Prometheus is described as a more powerful AI and optimized for search. Microsoft also claims it is a "responsible" platform, possessing protections against abuse and errors at every level.

Similar to Microsoft Edge, Google Chrome and Firefox are also famous Web browsers that many people love and use. Not only do they support effective searching, these Web browsers also contain many interesting extensions to assist users in their work.

Currently, new AI features on Edge browser are available in preview updates for users to experience. Similar to Microsoft, search giant Google is also testing an AI conversation service called Bard to participate in this artificial intelligence race.
