

Microsoft upgraded the cloud experience for users

At the Build 2014 event in the US, Microsoft has introduced cloud computing experiences, a set of platform technologies and services, helping software developers and businesses to improve speed. Booting through the new Microsoft Azure Preview Portal portal.

At the Build 2014 event in the US, Microsoft has introduced cloud computing experiences, a set of platform technologies and services, helping software developers and businesses to improve speed. Booting through the new Microsoft Azure Preview Portal portal.

Microsoft is revamping its cloud service

According to *Microsoft*, the *Microsoft Azure* Preview portal also offers a fully integrated experience that enables users to develop and manage applications from one space, using platforms and tools of their own choosing.

Microsoft also announced the global *Visual Studio Online* suite, demonstrating Microsoft's service has reached a height of service reliability, scalability and performance. Visual Studio Online offers 99.9% service limit.

Microsoft also shared a new open source partnership with *Chef* and *Puppet Labs* to run configuration management technologies on *Azure* virtual machines. Using these community technologies, users will easily deploy and configure on the cloud.

In addition, the day 4.4 (*VN time*) Microsoft will announce the release of Java applications for *Microsoft Azure Web Sites* , to support wider Web applications.
