Hello! TipsMake will help you solve the problem of Excel having Microsoft Visual Basic errors. Maybe my suggestions will help you fix the problem quickly. Let's find out together!

Problems related to Excel always make it difficult for users, especially those who are new to working with this software and are not yet 'familiar' with it. Among difficult errors, **Microsoft Visual Basic error in Excel** is also one of the problems that causes headaches for those who encounter it because they don't know how to fix it. **TipsMake** has searched for useful solutions, hoping to help you solve this problem.

Instructions on how to fix Microsoft Visual Basic error in Excel

Microsoft Visual Basic for Applications errors in Excel 2016, Microsoft Visual Basic for Applications errors in Excel 365, or other versions are mainly because you use the ghost version, not the original version of Office. Therefore, Microsoft Office has locked some features of Excel, including VBA functions.

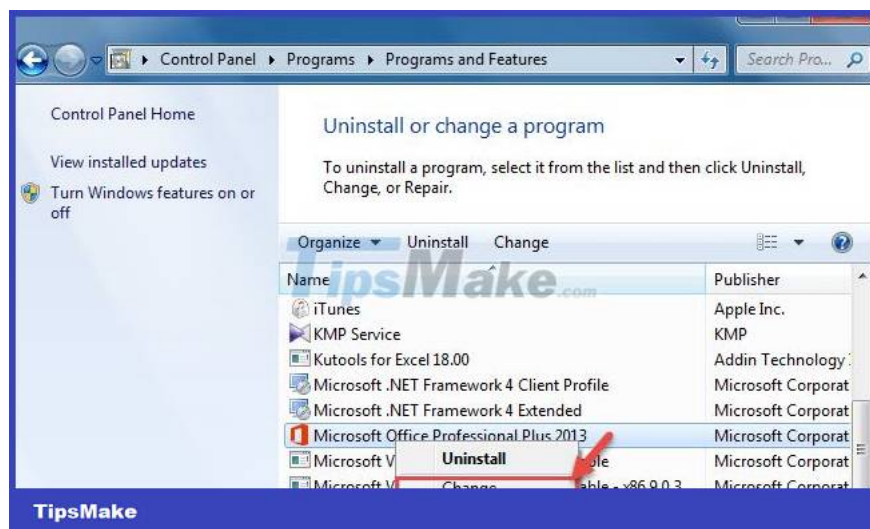

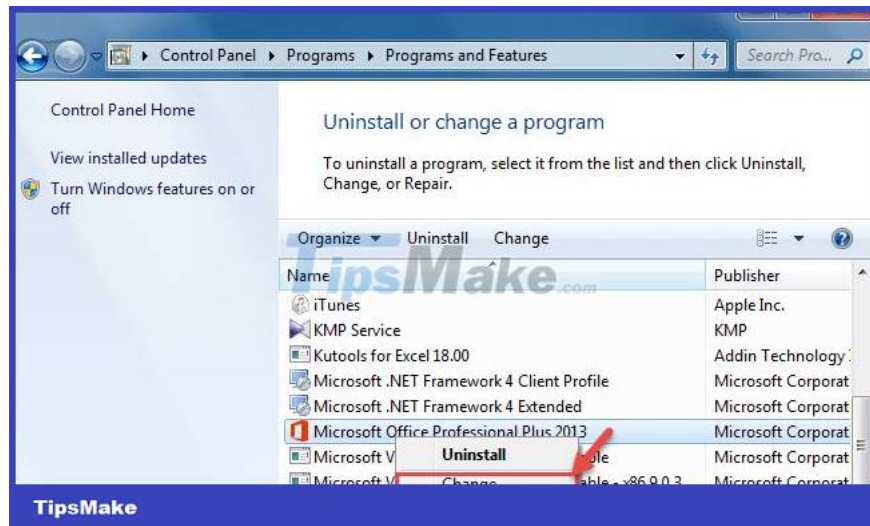

In this case, the best way to fix the error of not being able to run macros in Excel 2019/Microsoft Visual Basic for Applications error in Excel 2013, for example, is: remove the version of Excel you currently have and download the main version of Microsoft Office to Full use of features.

On the other hand, Microsoft Visual Basic for Applications errors in Excel 2010/20019/2016. may also be due to not having Visual Basic for Applications installed so there is no VBA. The solution will be shared specifically below.

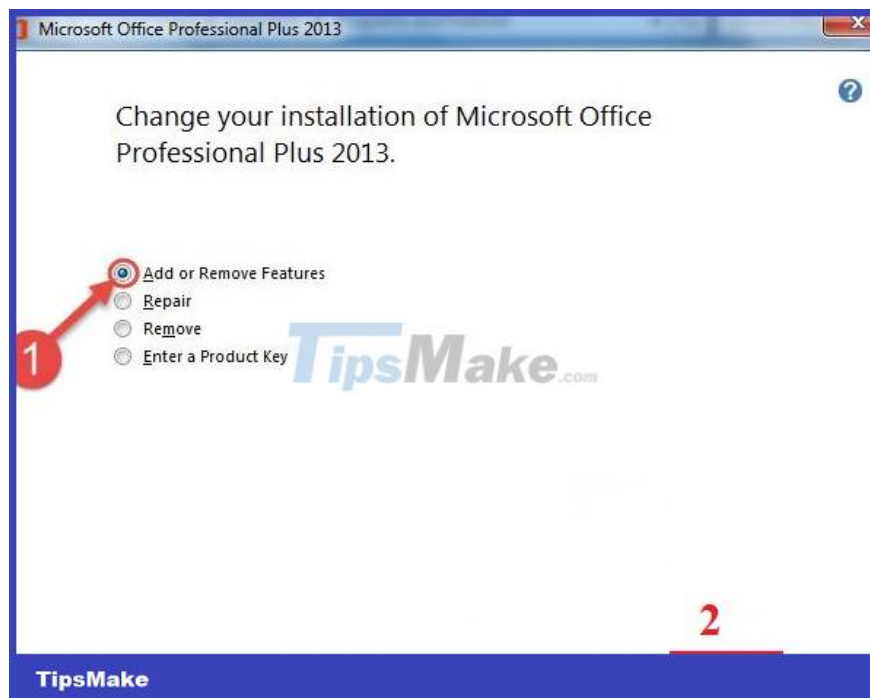

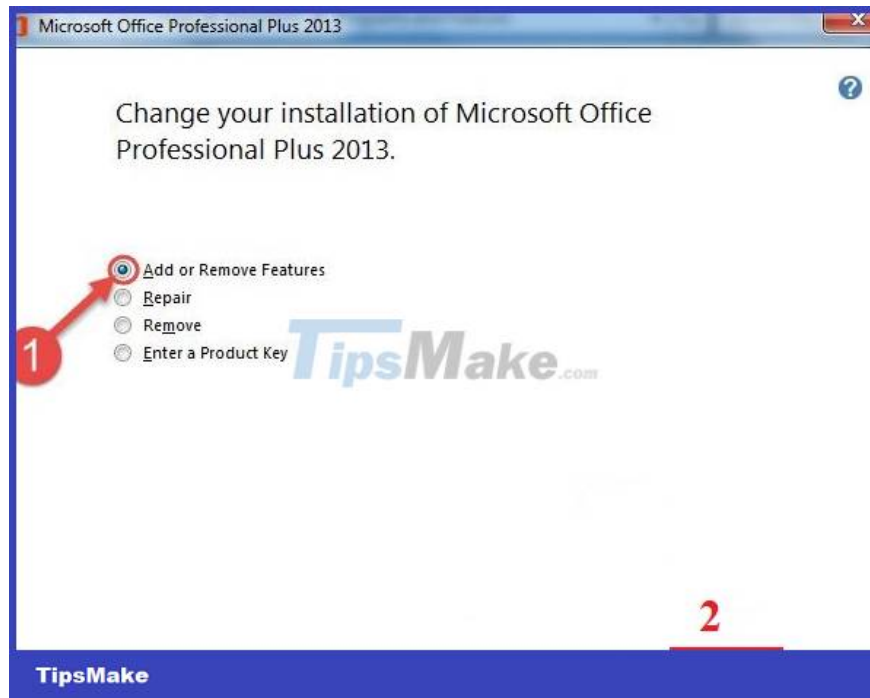

How to edit VBA code in Excel in detail

To add the Visual Basic for Applications package FOR Office, you need to do the following:

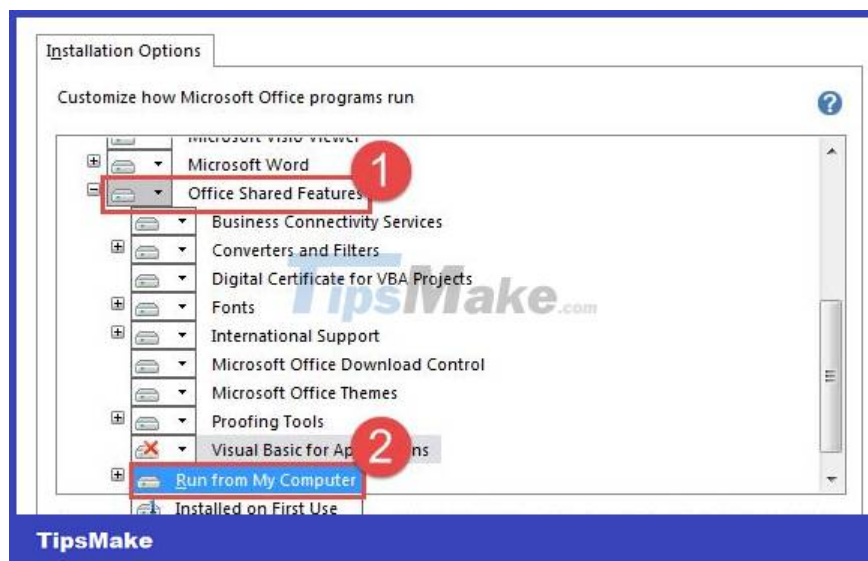

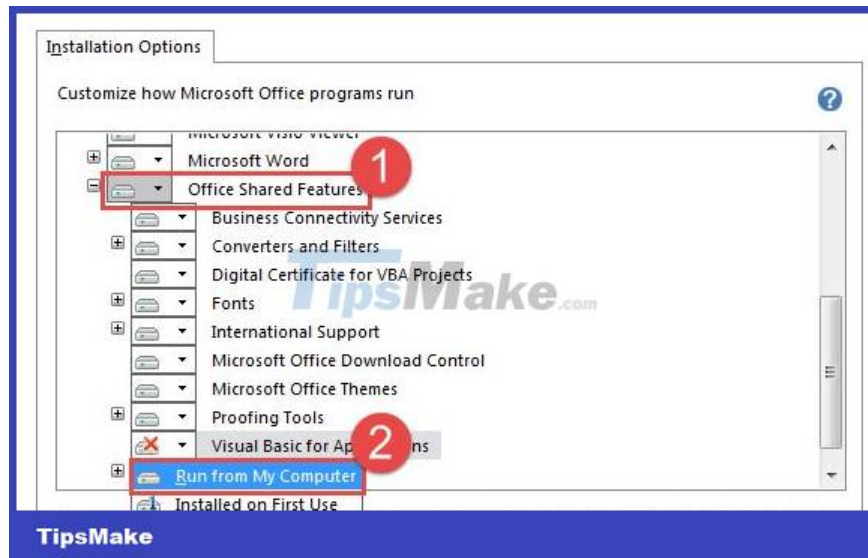

1. **Step 1** : Click the magnifying glass search icon on the taskbar > Type **Control Panel** and open it.
2. **Step 2** : In this interface, choose **Uninstall a program** or **Programs and Features** (depending on the operating system version you are using).
3. **Step 3** : When the list displays, click on the **Microsoft Office** line you have installed > Click **Change** .

1. **Step 4** : In the new window that appears, tick the **Add or Remove Features** line > Click **Continue** .

1. **Step 5** : On the **Installation Options** tab > Go to **Office Shared Features** . Then, in **Visual Basic for Applications** > Users select **Run from My Computer** > **Continue** to continue.

1. **Step 6** : The VBA (Visual Basic for Applications) Tool Repair process will take place, please wait patiently > After finishing, click **Close** or **Install Now** to complete this process .

Above are the solutions when Excel has a Microsoft Visual Basic error. TipsMake hopes that this method will help you solve the problem!
