

Microsoft warns of errors on updates for Windows 7

The patch with code 2823324 was warned by the software company that some computers could not be started.

The patch with code 2823324 was warned by the software company that some computers could not be started.

This upgrade belongs to the **MS13-036** package **released** by Microsoft on **April 9**. A representative of the software company said 2823324 patch fixes the error at an average level, to prevent hackers from attacking when accessing the computer directly in real life. The company recommends that users immediately remove this patch from the machine.
