What is a microwave oven with grill? Whether to buy or not?

Unlike conventional microwaves, microwave ovens can cook food in two ways:

1. **By Viba Wave:** The microwave wave emitted from the megatron power supply will follow the pipeline into the furnace chamber. When the walls are met, microwave waves are reflected back and forth. Water molecules in food will absorb microwaves, causing food to heat up and ripen from the inside.
2. **By heat (baking function) :** The heat bar in the microwave is responsible for converting electricity into heat, then heating and baking food.

It can be seen that a microwave oven is a 2-in-1 device. Instead of having to buy a microwave oven and buy a regular oven, you only need one microwave oven and grill in the house. Buying this device will both save you money and save space.
