

MIN function in SQL Server

The article will explore and show you how to use the MIN function in SQL Server to find the smallest value in a set.

The article will explore and show you how to use the MIN function in SQL Server to find the smallest value in a set.

Describe

The MIN function in SQL Server is an aggregate function that returns the smallest value in a group.

Syntax

To use the MIN function in SQL Server, we use the following syntax:

```
SELECT MIN(cot)
FROM bang
[WHERE dieukien];
```

Parameters :

1. *cot*: column or calculated value, the expression you want to find the smallest value
2. *state*: the table used to retrieve the record. Must have at least 1 table in the FROM clause.
3. *dieukien*: optional. Conditions that the record must meet to be selected.

Note :

1. The MIN function can be used in later versions of SQL Server: SQL Server 2017, SQL Server 2016, SQL Server 2014, SQL Server 2012, SQL Server 2008 R2, SQL Server 2008, and SQL Server 2005.

For example

Take a look and explore some examples of MIN functions in SQL Server.

Suppose, we have the following data table:

Bang: Quantrimang

IDChuyenmuc	Chuyenmucon	Chuyenmuclon	Sobai
QTM01	SQL Server	Lap trinh	101
QTM02	Facebook	Mang xa hoi	152
QTM03	Python	Lap trinh	101
QTM04	JavaScript	Lap trinh	122
QTM05	Google Chrome	Trinh duyet web	94
QTM06	Instagram	Mang xa hoi	165

Example 1: Find the minimum number of posts in the table

```
SELECT MIN(Sobai)
FROM Quantrimang
WHERE Sobai > 120;
```

Result: 122

In this example we have the minimum number of articles in a column in the Quantrimang table, which must be greater than 120.

Example 2: Use GROUP BY

The following example finds the smallest value of all records related to a large section, you will do the following:

```
SELECT Chuyenmuclon, MIN(Sobai) AS 'So bai it nhat'
FROM Quantrimang
GROUP BY Chuyenmuclon;
```

```
Result:
Chuyenmuclon So bai it nhat
Laptrinh 101
Mang xa hoi 152
Trinh duyet web 94
```
