

Minecraft: 4 most powerful mobs in the Nether dimension

The Nether can be said to be the most dangerous dimension in Minecraft because of the special terrain and the appearance of many powerful mobs.

#4 - Piglin zombie

Piglin zombies are a neutral mob in Minecraft so they will not attack gamers unless provoked. However, once you have made them angry, Piglin zombies will attack in groups with extremely terrible damage.

Just 4 accurate attacks from a single zombie Piglin is enough to make you worship, so it's best to never touch them.

#3 - Wither Skeleton

Wither Skeletons have the same ability to deal damage as zombie Piglin but they are more special thanks to their ability to cause the Wither effect - which deals extra damage over time and can kill the player.

Since the Wither Skeleton is a hostile mob, they will target you as soon as they see it. So, try to avoid getting into their eyes at all costs.

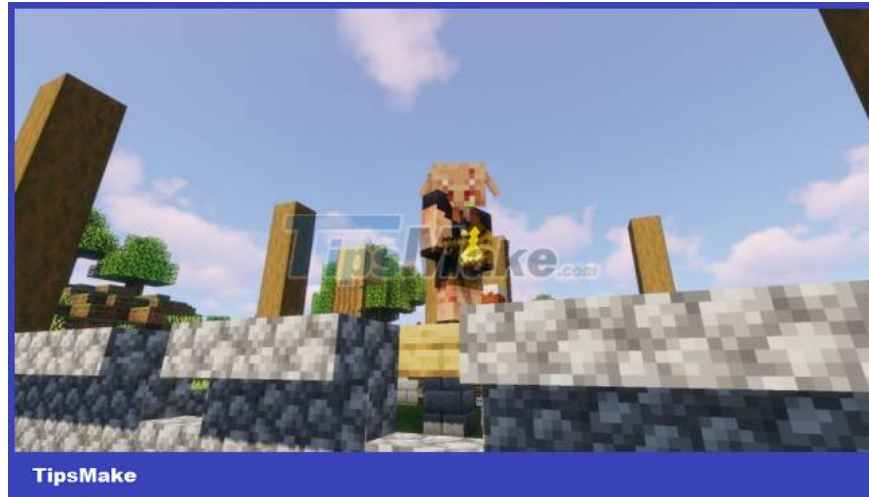

#2 - Ghast

A fireball of Ghast will instantly destroy 5 hearts of gamers. This is a stronger attack than almost all mobs in the Nether dimension, but the real danger is what follows.

Accordingly, Ghast's fireball will explode on impact and destroy blocks in the surrounding area, causing lava to flow in and burn the player.

#1 - Piglin Brute

Piglin Brute's attack power has been modified over time. If in the Java version, one attack of them consumes 7 hearts, in Bedrock, that number has increased to 7.5. When there is no weapon, the damage is reduced to 4.

Piglin Brute often attacks in groups, so the possibility of you being overwhelmed and killed is very high. In addition, they are hostile mobs, so they will also be ready to rush to gamers at first sight.
