

Minecraft: Top 4 best mods for gamers who love to build

One of the most popular and loved mods in Minecraft is construction-related mods.

WorldPainter

[Link DOWNLOAD WorldPainter here](#)

WorldPainter is one of the most interesting Minecraft mods ever launched into the construction gaming community. This mod can render images from a Paint software, such as Microsoft Paint, into the world of Minecraft.

WorldPainter is completely free and open source. So, gamers can grasp the usage of this mod very quickly and start implementing their own unique building ideas.

Instant Buildings

[Link DOWNLOAD Instant Buildings here](#)

While building in Minecraft is a very enjoyable activity, it is extremely tedious to constantly build too many of the same things. That's why a mod called "Instant Buildings" was created to help players build typical structures quickly.

Up to now, this mod has had up to 20 different unique constructions for gamers to access and use immediately.

Effortless Building

"Effortless Building" focuses on the ultimate building experience in the world of Minecraft. This mod has a lot of useful features to minimize the time in the build process like:

1. Possibility to easily replace already placed blocks
2. Random generator of different types of blocks
3. Mirror mode to build everything symmetrical
4. Ability to copy and paste parts of a construction

5. Works in both survival mode and creative mode

In addition, "Effortless Building" also includes 12 different building modes to help optimize specific construction areas.

WorldEdit

WorldEdit is probably the most famous Minecraft building mod of all time. This mod currently has tens of millions of downloads since its launch to date.

WorldEdit makes it easy for players to perform large operations and saves gamers hours or even days of construction thanks to its virtually unlimited scale.

A good example of WorldEdit's convenience is the ability to import and export schemas. As a result, you can transfer your constructions between different Minecraft worlds or directly import new constructions downloaded from the Internet.
