

# Minecraft: Top 4 'cool cat' sky building designs!

Although building bases in the sky is very dangerous, they are still one of the popular designs in Minecraft and are worth a try.

Coming to Minecraft, players can freely build anything they want such as simple houses, villas, underground bases and more. In general, there are many different types of bases to build but the most difficult is still based in the sky because they are really dangerous because you cannot fly in Survival mode. Even so, those are still popular and unique designs that are worth experiencing

## Tower design

A base in the sky doesn't have to be hovering in mid-air, this means it can stay high but doesn't need to be 'disconnected' from the ground. Accordingly, a massive tower with a giant staircase or a ladder going up is definitely a great idea.

This is one of the design ideas that are easy to implement and use, and that's why Minecraft gamers often love to take advantage of this design.

## Water tunnel

Also a very easy to deploy elevated base with a water tunnel to the top. Basically, players will have to swim up there but this is not too difficult and lousy. This design allows for ground separation and complete accessibility.

## Huge platform

Usually, building a huge base usually consists of several buildings, gardens and more. To perform all these works in the sky, the player needs to meet a lot in terms of space and time, so building a giant platform is the best way to make sure everything is out of the way. ground.

## Skyblock

Skyblock is rated as one of the most fun and difficult modes in Minecraft. This is the simplest base because it does not contain too much space. However, Skyblock is really fun, creating a small sky base and living there is a big challenge but very attractive to players. And it's also one of the top popular map types, a great base sky design.
