

Minecraft: Top 5 best solo mods in 2022

If you are a Minecraft gamer who likes to play alone, do not ignore the following top 5 best solo mods in 2022.

MineColonies

This is a mod that allows players to build their own town in Minecraft and mainly focuses on the strategy, planning and productivity of a newly designed town. Similar to Vanilla Minecraft, players are provided with an extremely dynamic and flexible world to ensure differences between builds.

Coming to MineColonies, you will encounter many NPCs such as: Builder, Farmer, Fisherman, Jungler, Guardian, Miner, Alchemist, Baker, Cook,. and of course between them will have their own functions and purposes.

Terralith 2.0

This is a mod that is considered an upgraded version of Terralith, released exclusively for the Caves and Cliffs part 2 update. If Minecraft version 1.18 brings a new look to the game by adding many new biomes and features, the Terralith 2.0 mod alone only expands some parts, not new blocks, so it retains the original 'vanilla' feel of the game.

Terralith 2.0 completely revamps the Overworld dimension by adding countless new biomes and caves, and is compatible with both Fabric and Forge.

Create

The "Create" mod deals with building using technology and automation. It adds a lot of new blocks and tools to the game that players can use to design any kind of machine they want.

These can include windmills, sorting systems, harvesters, generators, etc. The concept of power is introduced in the game, which expands the functionality and leads to the creation of tons of machines. .

Just Enough Items

Just Enough Items, or JEI, is a mod that adds a recipe viewing system to the game. You can access the same menus through my repository. Selecting an item in the inventory will show the player all the recipes that the item was used for.

Additionally, selecting an object within the JEI menu introduces the recipe for that item.

Biomes O' Plenty

Biomes O'Plenty is one of the most famous mods of the game. Even though it's almost seven years old now, this mod is still one of the top picks for terrain generation mods. It adds about 80 new biomes to the game, along with new blocks, trees, plants, flowers, and more.
