

# Missing fx bar in Excel and SUPER SIMPLE way to display it

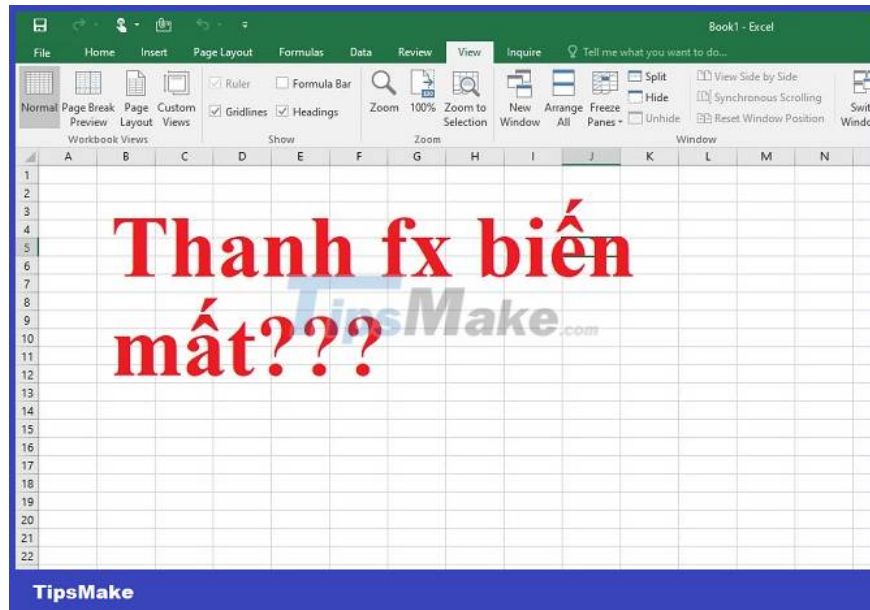

Losing the fx bar in Excel makes you uncomfortable and inconvenient during work? How to find it again has been shared by TipsMake

*Losing the fx bar in Excel makes you uncomfortable and inconvenient during work? The super easy way to find it has been shared by TipsMake in today's article, follow it now!*

When working with Excel, sometimes users will encounter situations falling from the sky that make you 'sweat' and don't know how to solve them. Especially for those of you who are just getting acquainted and not yet proficient in Excel. **TipsMake** has also shared many articles about Excel technology tips, so don't forget to follow them.

In today's **tips section** , we discuss the problem of **missing fx bars in Excel** . The fix for this problem is not difficult, details are in the following section.

## Why is the fx bar missing in Excel?

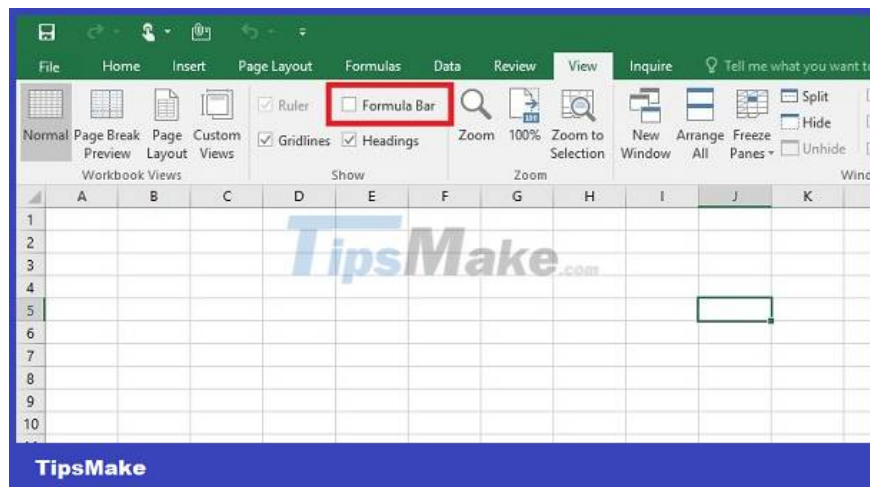

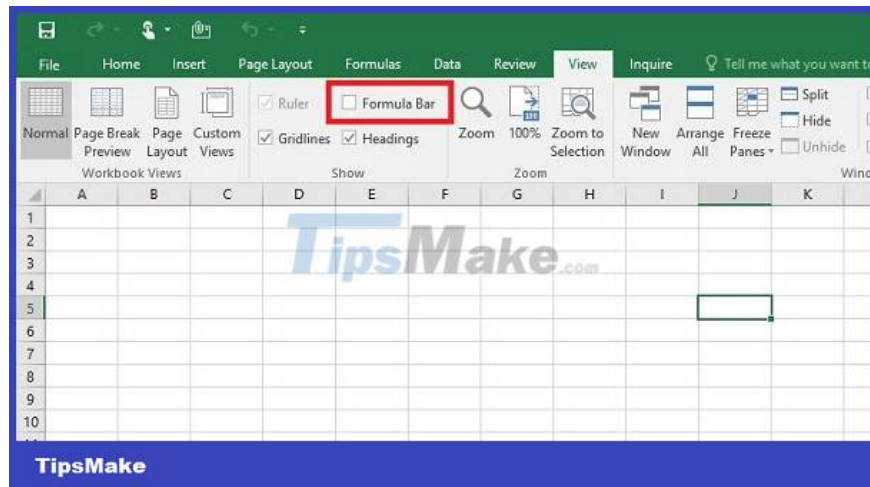

The fx bar in Excel is also known as Excel formula bar - This is a special toolbar located at the top of the worksheet window. This bar has a sticker with the fx function icon. Here, users can enter a new formula or copy an existing formula on this bar. One of the advantages of the fx bar is that you can see the entire formula range without having to expand the cells.

**Note**, the formula bar will be turned on as soon as you press the = sign in any cell. Or when you click anywhere on this formula bar. But why did Excel lose the toolbar above?

### Reason why the fx bar in Excel is not displayed

Don't worry if you don't see this fx bar. Because this is not a problem, the reason is because you accidentally hid this Excel formula bar toolbar. The steps to hide the fx bar in Excel are:

1. **Step 1** : In open Excel, click the **View** tab > Find the **Show** area .
2. **Step 2** : Uncheck the **Formula Bar** box .

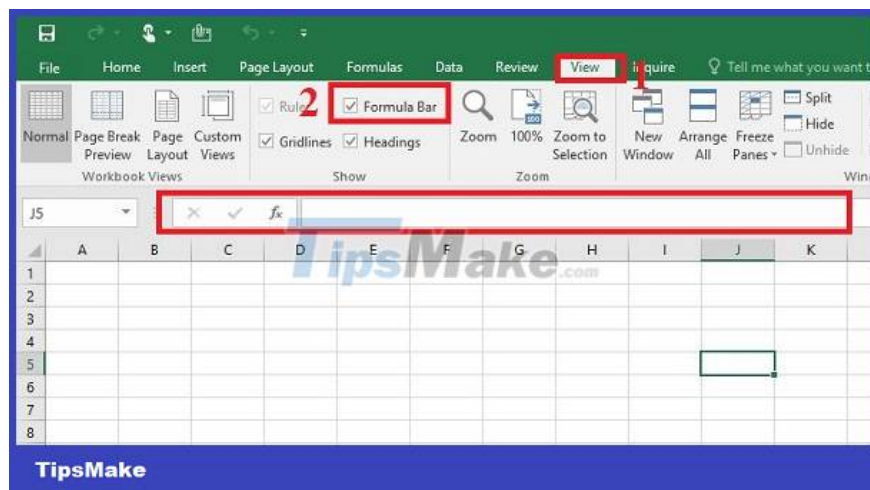

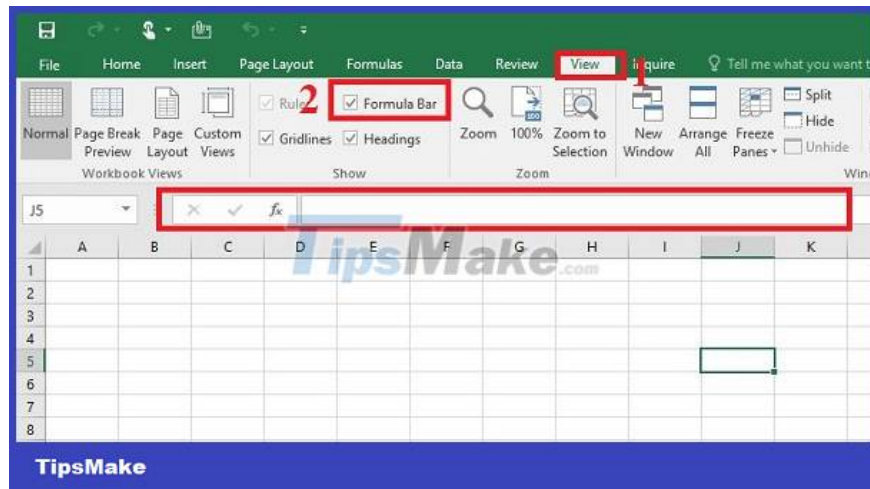

So it can be seen that the fx bar does not appear because you hid it with the steps above. Therefore, the solution is not complicated. Please follow the next part now!

## Instructions on how to display when the fx bar is lost in Excel

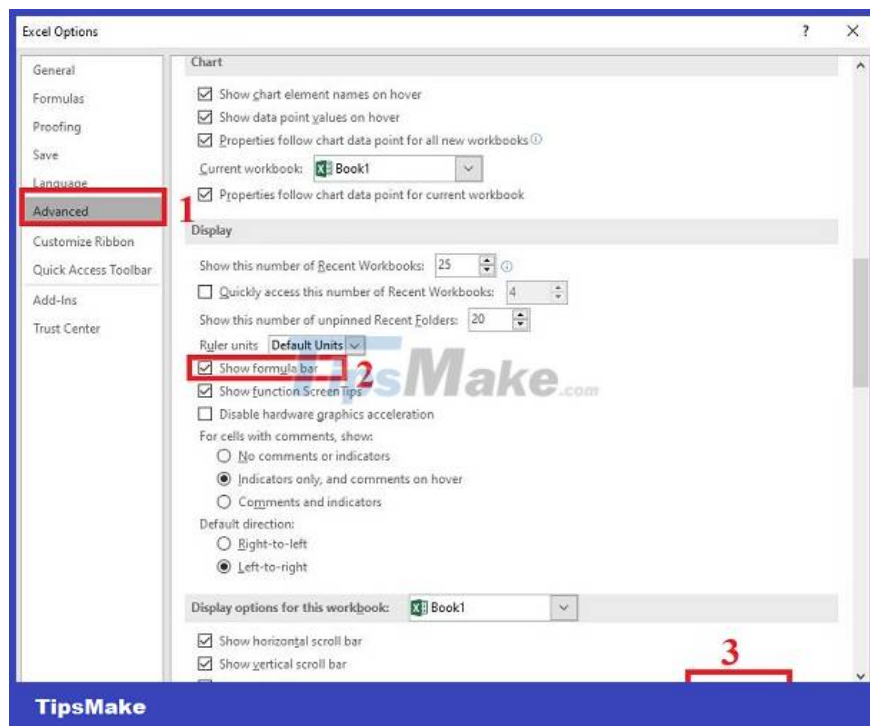

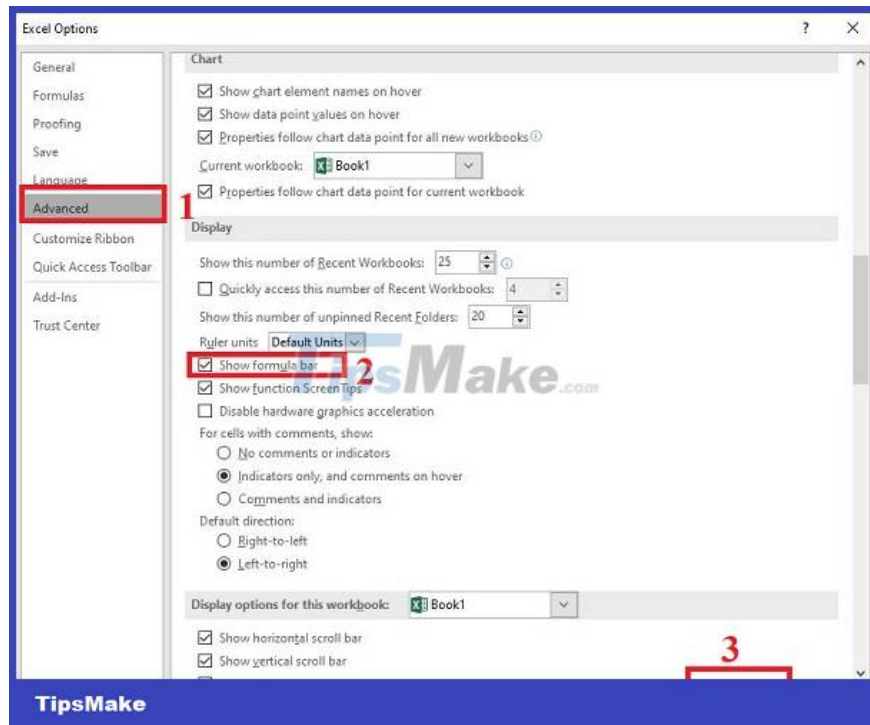

How to display the fx bar in Excel is very simple. The following are detailed steps for each version.

### Learn how to display the fx bar in Excel 2016, 2013 and Excel 2010

1. **Step 1** : In the Excel file without the fx bar, click on the **View** tab and find the **Show** section .
2. **Step 2** : Tick the **Formula Bar** box and you will see the fx bar displayed.

In addition, you can also turn on this special toolbar by: Click the **File** tab > **Options** > Select the **Advanced** tab in the list on the left > In the **Display** section on the right area, tick **Show Formula bar** > Click **OK** to save.

## Learn how to show the fx bar in Excel 2007

For Excel 2007, you will find the **Formula Bar** in the **View > Show/Hide** tab. Make sure Formula Bar is selected to display the fx bar!

## Learn how to show the fx bar in Excel 2003 and XP
