

Move the Google toolbar vertically

Recently on my blog, Google announced that it will soon switch its toolbar to a vertical bar, and now it takes only a small step to experience this new toolbar.

Recently on my blog, Google announced that it will soon switch its toolbar to a vertical bar, and now it takes only a small step to experience this new toolbar.

Users of Google services are probably no stranger to the black toolbar that contains applications at the top.

But recently Google announced that it will upgrade and delete the toolbar completely, instead it will be a vertical open toolbar when users drag the mouse to the Google logo on the left side of the screen.

What's new in this upgrade is the integration of the update feature for Google+ social network by adding a notification box and Share button to share status, photos . right on the search screen.

Currently the updated version is still in beta, but from now on users will be able to try this feature on popular browsers like Chrome, Firefox or Internet Explorer (version 8 and above).

You do the following:

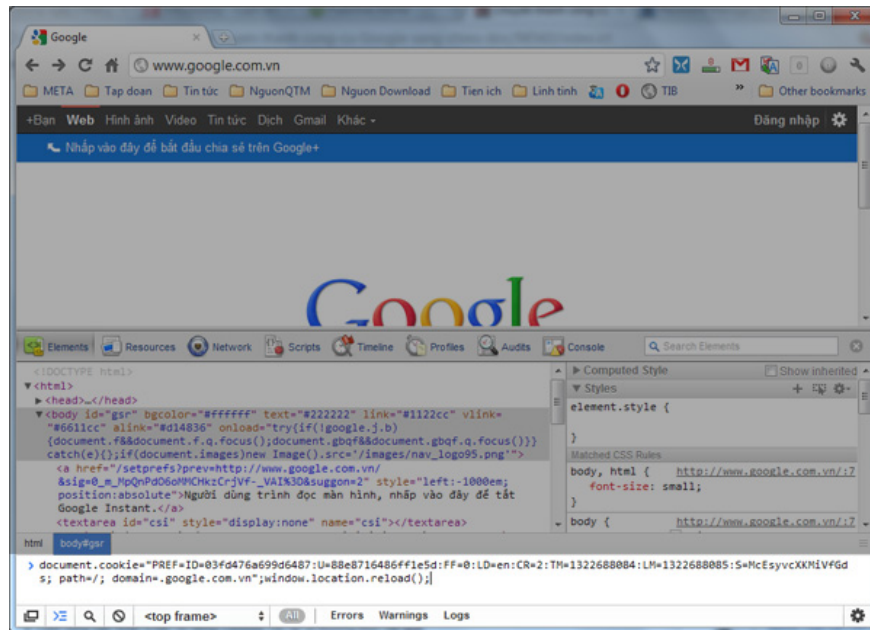

1. Open a new card in your browser and type in the Google.com address

2. Link to the following actions for each browser:

+ On Google Chrome you open JavaScript console with **Ctrl + Shift + J**

+ In Firefox browser, open Web Console with **Ctrl + Shift + K**

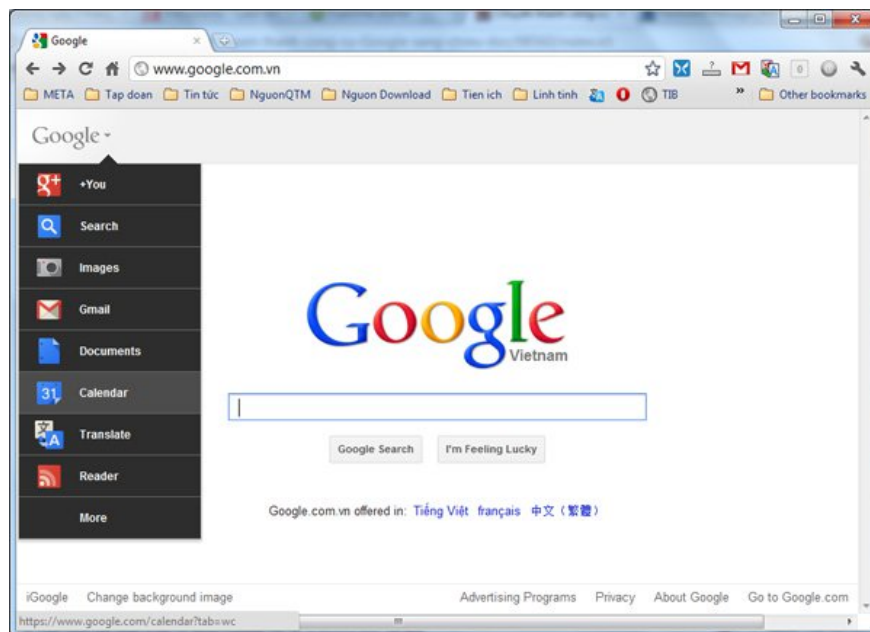

+ If you use IE, open Developer Tools by pressing **F12** and selecting the " **Console** " tab.

3. Paste the following code into Console:

```
document.cookie = "PREF = ID = 03fd476a699d6487: U = 88e8716486ff1e5d: FF = 0: LD = en: CR = 2: TM = 1322688084: LM = 1322688085: S = McEsvycXKMiVfGds; path = /; domain = .google.com.vn"; window.location.reload ();
```

4. Finally, press Enter and then close this Console and enjoy the result.
