

Move your Facebook account to Google+

You may not be ready to give up the familiar Facebook 'house', but with what Google Plus achieved only after a short time of launch, the user community can hardly resist the attraction as well as attractive from this new social network model ...

TipsMake.com - Maybe you are not ready to give up the familiar Facebook 'house', but with what Google Plus achieved only after a short time of launch, the user community can hardly resist the Attractive and attractive from this new social network model. But the problem here is that users have a lot of friends, partners, photos, videos and other personal data here, if leaving Facebook also means they have to remove huge amounts of data there. In the following article, we will show you how to perform this process from **Facebook** to **Google Plus**.

Transfer Friend list:

In essence, a social network will not be attractive without the **Groups** - friends and groups, so our first thing is to move this Friend list. Up to this point, not everyone knows how to use **Google+** and its functions.

New! Bring together all the people you know in one place

Facebook

Gmail

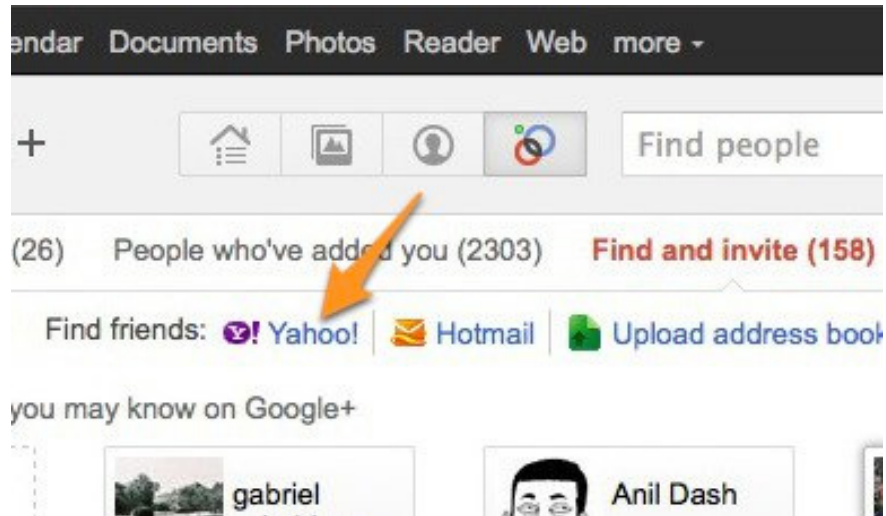

Windows
Hotmail

A fairly simple way to do this is to import the entire **Friend** list via a **Yahoo** email address. This may sound ambiguous, but in fact when a part of the user applies how to move this information via browser extensions or support tools, **Facebook** disconnects this process pretty quickly. because they don't want anyone to 'intervene' in the user community. Besides, the way to build not based on Yahoo used to assign **Facebook** accounts or friends via **Google Contacts** is probably not many people apply. On the other hand, not everyone uses Yahoo, but this application takes less time, no need to declare personal related information similar to **Facebook** .

To get started, please visit here, click the **Create New Account** button (if you already have a Yahoo or Flickr account, you can skip this step). After creating a new account, log in and open **Contacts**> **Import Contacts** and

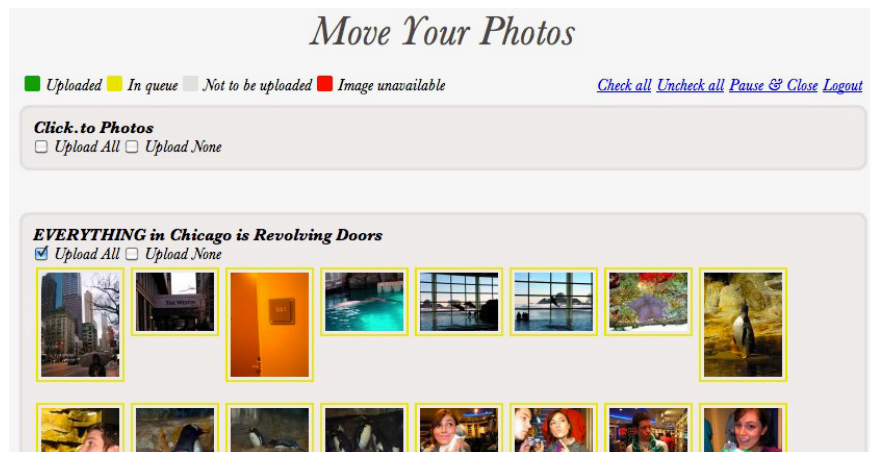

select **Facebook** , where you will see all your **Facebook** friends accounts in **Yahoo** 's address section.

Finally, log into your **Google+** account and use the **Circles** function, select **Find** and **Invite** and click the **Yahoo** button. The system will automatically assign all accounts on the Yahoo Contacts list (or **Facebook Friends** in this case) to the **Find and Invite** page, and here the user just needs to select and assign the appropriate accounts to **Circle** 's **Google Plus**.

Move Photo:

In fact, if you do this process on **Chrome** browser, it is very simple and fast with the Move Your Photos extension. All you need to do is install the extension, click on the program icon and then log in to your **Facebook** account. Select any photo to move and click the **Upload** button at the bottom of the page, we will see the progress of the work displayed through the **Progress** bar at the bottom right of the screen, at this point you should not post out of the account.

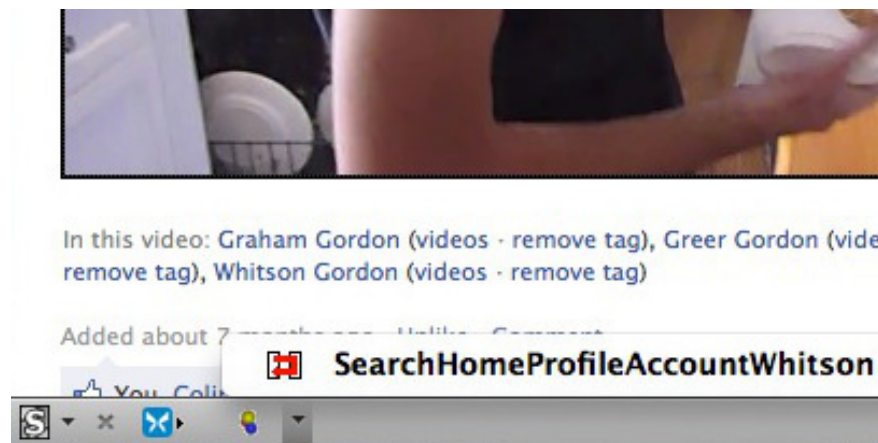

Once completed, you will see the corresponding photo album displayed in **Google+** , and by default they are not set to **Public** , and the user can customize each album or photo. via **Visible To> Edit**.

In case you don't use Chrome browser, please refer to the Photo Importer utility for Firefox, but we have to do it in turn. Therefore, you should use Chrome because the processing speed and performance are much higher than Firefox.

Move Video:

When you want to do this process, things become much harder, because up to this point we have only 1 way: to download all videos from your Facebook account and then Upload again. To do so, open **Account> Account Settings> Download Your Information link** , select learn more link and click the Download button. This process will take place for a while for the system to collect all your information, and when finished, you will receive a notification email and download the compressed file in * .ZIP format which contains all the image files. , videos, and personal information included.

Then, log into your **Google+** account, select **Profile> Videos** , select the **Upload New Videos link** , select the video files to upload and wait for the process to finish.

Update on Facebook and Google+ at the same time:

After all the data has moved, start the process of learning and using the new **Google+** model. However, there are still some remaining friends or partners on **Facebook** that we need to keep in touch. And the best way to do this is to use the **Google Plus Start** utility for **Chrome** and **Firefox** . After installation, we will see the Facebook and Twitter icons in the upper right corner, making it easy for users to connect to the corresponding accounts. After the **Facebook** account is connected, the entire status - Status done on **Google+** will also show up on **Facebook** , just by clicking on the **Facebook** icon. This process will come with all the links, photos, videos or any related data.

Besides, starting using **Google Plus** will also pull the entire feed from **Facebook** and move here, so you don't need to check the **Facebook** feed anymore.

More Facebook Mobile Products

Upload via Email

Use a personalized upload email to post status updates or send photos and videos straight to your profile. Your personal email is:

[@m.facebook.com](#)

[Send my upload email to me now](#)

facebook.com

- Update your Status, browse and view friends' Profiles all day long
- Works on all phones with internet access

[Text a link to my phone](#)

In case the user does not want to use the extension support utility, it is possible to perform the above process based on the Upload via Email feature of Facebook. Just visit the **Facebook** mobile page, copy the **Upload** email address **via Email** and assign it to the Facebook circle section on **Google+** . Since this time, every time you update status on **Google+** , Facebook will also display that status. But on the other hand, this approach may not be perfect, as it only supports status information that does not exceed 50 characters, cannot contain images .

Good luck!
