

## Mozilla officially launched Firefox 18

After testing time, Mozilla last night allowed to download the official version of Firefox 18 browser with many valuable improvements. Special support WebRTC, Retina screen support (on Mac) and integrated IonMonkey compiler to help JavaScript up to 25% faster.

**After testing time, Mozilla last night allowed to download the official version of Firefox 18 browser with many valuable improvements. Special support WebRTC, Retina screen support (on Mac) and integrated IonMonkey compiler to help JavaScript up to 25% faster.**

According to Mozilla, in the presence of IonMonkey support JavaScript, playing a 3D game on the web is no longer as annoying as before. IonMonkey is developed based on JagerMonkey architecture, which can optimize JavaScript up to 25%. For example, Mozilla has advised users to play a 3D game on the old Firefox browser and Firefox 18 to see the difference.

Another update for those who love Apple's Mac products is that the new browser will support and optimize the Retina screen. In addition, an Awesome Bar box offers suggestions to users when they type in search keywords and suggests the most reliable results, warning malicious and phishing sites.

However, Firefox 18 still has limitations such as not having integrated PDF Viewer to view \*.pdf files.

Full features of Firefox 18 include: faster JavaScript performance through IonMonkey compiler, Safe Browsing function for Firefox 18 on mobile, support for loading new fonts for the browser, disabling content not safe from https pages, suggest reliable search results, optimize Retina screens .
