

MSI presents a laptop with 3K screen, dual SSD

Technology firm MSI has officially presented the laptop to play GS60 Ghost Pro 3K screen at CeBIT event in Germany. This product has a terrible configuration with Intel Core i7 Haswell processor, dual-drive SSD and new generation NVIDIA graphics in 2014.

Technology firm MSI has officially presented the laptop to play GS60 Ghost Pro 3K screen at CeBIT event in Germany. This product has a terrible configuration with Intel Core i7 Haswell processor, dual-drive SSD and new generation NVIDIA graphics in 2014.

MSI GS60 Ghost Pro owns a 15.6-inch screen with a 3K 2880 x 1620 pixel ultra-sharp resolution. The product uses Intel Core i7 processor Haswell code, dual SSD storage (*additionally Super RAID if required by the user*), supports the installation of an additional hard drive and has a high-speed 802.11 ac WiFi connection.

The laptop is equipped with a new generation NVIDIA discrete graphics in 2014, though, the MSI representative at CeBIT did not disclose any information about this vital component. According to some predictions, discrete graphics on GS60 Ghost Pro belongs to NVIDIA's Maxwell architecture, ensuring smooth processing of the latest games at high settings on the 3K screen of the machine.

Despite being a dedicated gaming laptop, GS60 Ghost Pro is quite thin and light with a thickness of 19.5 mm and a weight of 1.99 kg. It is known that this product will be officially released in April with the price expected from 2200 USD to 2800 USD (*equivalent to 46 million and 58 million*) depending on the configuration selected by the user. Note that this is still not the price in Vietnam market.
