

MSI upgraded the ultra-thin laptop

MSI's new products are equipped with low-voltage processors and powerful graphics cards in a compact shape.

MSI's new products are equipped with low-voltage processors and powerful graphics cards in a compact shape.

X420 is the newest member to join MSI's X-Slim ultra-thin laptop line. This model owns a 14-inch widescreen HD screen with the largest resolution of 1,366 x 768 pixels and power comes from Intel Core 2 Duo processor SU7300 or SU4100.

The X420 maintains the ultra-slim tradition of the X-Slim series. *(Photo: MSI)* .

The device is also equipped with 4GB of RAM, hard drive capacity up to 500 GB. Especially MSI's new product is also powerful with ATI Mobility Radeon HD 5430 graphics card with 1GB of DDR3 VRAM memory.

X420 has Wi-Fi connection, Bluetooth, two USB 2.0 ports, memory card reader, eSATA port and 1.3 Megapixel camera for remote video meetings.

MSI's new model has a thickness of only 2.41 cm and weighs 1.88 kg with 4 cell battery with the same usage time as the manufacturer's announcement for up to 9 hours continuously.

The X420 will come preinstalled with Windows 7 Home Premium operating system and sold at a starting price of about 799 USD.
