As the upgraded version of U160, MSI U160DX has a design that is not much different from its brother. The hinge with the power button of this model continues to "borrow" from the Sony Vaio TT and touchpad like the Asus Eee PC 1005. The reasonable key distance and size of the 4-way joystick are convenient to use. .

The outstanding MSI U160DX is one of the first netbooks to support DDR3, MSI's Turbo Drive Engine technology, Intel Atom N455 processor. The machine stands out with the usage time of the manufacturer promising 15 hours thanks to ECO energy saving technology.

There is no information about the price and the official launch date of this model.
