

# Multiple choice questions on network security deployment have the answer P4

Please read our knowledge and interesting multiple choice questions about our network security deployment below. The question set will have 10 sentences to try.

1. Question 1. User authentication when logging into Windows XP, 2000 or 2003 system using algorithm
  1. RSA
  2. Keberos
  3. MD5
  4. SHA
2. Question 2. To perform a Trojan attack, an attacker just needs to
  1. Creating an executable file (\*.exe, \*.com) that runs on the victim machine is enough
  2. Give the victim the computer to infect any virus
  3. Simultaneous execution of 2 files, one file operating on the victim machine, the other file operating on the attacker's machine
  4. There is no right answer
3. Question 3. IPSec security protocol operates on the floor
  1. Only at the transport layer in the OSI model
  2. From floors 4 to 7 in OSI model
  3. Network Layer in OSI model
  4. All is wrong
4. Question 4. Indicate which statement the following statements are most correct about the registry
  1. The Registry is a database used to store information about changes, options, settings from Windows users.
  2. Registry is a software utility that helps users to change Windows configuration when needed
  3. Registry is a component of Windows operating system
  4. All right
5. Question 5. There are many types of data in the Registry
  1. 4
  2. 5
  3. 6
  4. 7
6. Question 6. The data types used in the registry are
  1. interger, real, text, string
  2. HKEY\_CLASSES\_ROOT, -USER, HKEY\_LOCAL\_MACHINE, HKEY\_USERS, HKEY\_CURRENT\_CONFIG, HKEY\_DYN\_DATA
  3. HKEY\_CLASSES\_ROOT, -USER, HKEY\_LOCAL\_MACHINE, REG\_BINARY
  4. REG\_BINARY, REG\_DWORD, REG\_EXPAND\_SZ, REG\_MULTI\_SZ, REG\_SZ
7. Question 7. To hide all drives in the registry (A, B, C, D .), how much REG\_DWORD variable in Userkey and Systemkey is worth

1. 65656000
  2. 67188270
  3. 67108863
  4. All is wrong
8. Question 8. To use authentic Keberos V5 on all Windows 98 workstations, people do
1. Update Windows 98 to XP or Windows 2000
  2. Install the Distributed Security Client utility on all computers running Windows 98
  3. Just install Active Directory on the System Server
  4. Unachievable
9. Question 9. When installing Windows 2000 Server on an NTFS system, but there is no Security section displayed at Security tables?
1. Update Windows 2000 without remote before installing
  2. Install Windows 2000 multiple times on the Server
  3. Windows 2000 version is not copyrighted
  4. All right
10. Question 10. The Active Directory service performs the following functions
1. Organize and build domains; authentication and authorization for objects
  2. Only the activities of security services for Windows Server and authentication and authorization for objects
  3. Only perform authentication and grant permissions for users and groups
  4. Manage resources and users; authenticate and grant rights to users and groups; monitor user activities
