

NASA 'changes' the birth dates of 12 zodiac signs, 86% of people will have their constellation changed to another star sign

The 13th zodiac sign is called Ophiuchus, which is the constellation Ophiuchus.

For many people, the Zodiac is one of the reliable horoscope methods (astrology) based on the relationship of astronomical phenomena, corresponding to human destiny based on date of birth.

3000 years ago, the ancient Babylonian civilization invented the concept of "12 zodiac signs", corresponding to 12 constellations. The day people were born will align with that constellation and it will affect our personality.

However, recently NASA said that astronomy and astrology are two different categories. In addition, the position, size and shape of the 12 constellations have changed, no longer the same as in the past. The reason is that the Earth's axis changes, causing the Spring Equinox to also shift. And after 3000 years, the Spring Equinox has now moved from the Aries constellation to the Pisces constellation. Therefore, today's zodiac signs will be

deviated by more than 1 sign, meaning 1 month, compared to the way the ancient people calculated the zodiac signs.

NASA said that the Babylonians only took 12 constellations to easily calculate the 12-month calendar year. In reality, our Sun moves through 13 constellations. That means there will be 13 zodiac signs. The 13th zodiac sign is called Ophiuchus, which is the constellation Ophiuchus.

The new order of the 13 zodiac signs, corresponding to the date of birth according to NASA's new concept is as follows:

1. Capricorn - Capricorn: January 20 - February 16.
2. Aquarius - Aquarius: February 16 - March 11.
3. Pisces - Pisces: March 11 - April 18.
4. Aries - Aries: April 18 - May 13.
5. Taurus - Taurus: May 13 - June 21.
6. Gemini - Gemini: June 21 - July 20.
7. Cancer - Cancer: July 20 - August 10.
8. Leo - Leo: August 10 - September 16.
9. Virgo - Virgo: September 16 - October 30.
10. Libra - Libra: October 30 - November 23.
11. Scorpio - Scorpio: November 23 - November 29.
12. Ophiuchus - Ophiuchus: November 29 - December 17.
13. Sagittarius - Sagittarius: December 17 - January 20.

NASA said they did not change the zodiac sign but were simply doing math. Their mission is to study astronomy, giving numbers of today, not astrology, a remnant of ancient civilizations.

In short, Astronomy and Astrology are two different categories and the 13 zodiac signs are just NASA's concepts. So you can believe it or not, it's okay.
