Both new models of the Samsung N series netbook N150 Plus and N145 Plus are equipped with EBL (Enhanced Battery Life) technology, which increases battery life by up to 13.5 hours instead of 11.5 hours ago. according to the manufacturer. M150 Plus will be a more advanced model with equipped SSD SSD capacity of 63Gb, pre-installed Windows 7 operating system. The remaining version, N145 Plus will still run on Windows XP operating system.

In addition, the N150 Plus also features a 10.4-inch LED screen while the N145 Plus will have a better scratch-resistant cover than before. Both models will be equipped with the first 3G HSDPA and WiBRO connectivity in the Korean market.

On the same day, Samsung also introduced upgraded versions of the R series with better configuration including Intel Core i5 or i7 processor options, LED backlight screens, latest ATI graphics cards, Radeon HD545V with

512MB or 1GB of VRAM memory, DLNA technology and Bluetooth 3.0 connectivity.

There is no information about these products yet.
