

## New feature in Windows 8 for laptop users

Newly released Windows BUILD version of Microsoft focuses on a lot of features compatible with tablets but still promises to support the use of desktop and laptop computers with keyboard and mouse

**Geek Management** - The newly released Windows BUILD version of Microsoft focuses on a lot of features compatible with tablets but still promises to support the use of desktop and laptop computers with keyboard and mouse .

### Better performance for both old and poorly configured laptops

Windows 8 uses less memory than Windows 7. According to Microsoft, the first version of Windows 7 uses 540 MB of memory while Windows 8 is less than half, only 281 MB. This means you can run Windows 8 on an old netbook (with about 1GB of RAM) and feel higher, smoother performance.

### Multi-screen support

Windows 8 has improved hardware support, including features like using multiple monitors, better handling of the taskbar. This is a real benefit for laptop users because adding screens is essential, especially when presentations are needed.

## Improved security

The new Reset feature allows you to restore your computer to the factory state, eliminating many major problems with data in case you give or give back your laptop to others.

### Refresh your PC without affecting your files

If your PC isn't running well, you can reload Windows without losing your photos, music, videos, and other personal files.

## 3G / 4G monitoring

Microsoft also introduced a new control panel that allows you to quickly track your plans to use 3G or 4G data on your laptop.

## Interact and connect devices

The idea of ??deploying a new interactive feature on the system is "tap to share", where you can exchange data with other devices via NFC or antennas. You may not often interact between laptops and smartphones, but once again Microsoft shows that they still care about this issue, and you may change your mind.

# Control Panel

## General

Change time zone and keyboard settings, or refresh your PC

## Search

Pick what/where you want to search, or delete your history.

## Share

Pick the apps you use to share stuff or delete your history.

## Send

Pick the apps you use to send stuff to devices.

## Ease of Access

Make your PC easier to use.

## Devices

Manage the things you connect to your PC, like printers and

## HomeGroup

Share libraries and devices with others on your homegroup.

Most of the different changes in Windows 8 apply to all types of devices, not just on laptops. The center of Windows 8 is geared towards attractive features for tablets, but the inner core is still for PCs with regular keyboards.
