

New research, iPhone users do not like dating Android smartphone users

According to the results of Match.com, a dating site, iPhone owners tend to dislike the Android phone and this may affect their decision to choose a lover.

According to the results of Match.com, a dating site, iPhone owners tend to dislike the Android phone and this may affect their decision to choose a lover. This is the conclusion made by this website after surveying more than 5,500 single American citizens over the age of 18.

Accordingly, those who are using the iPhone will have a negative assessment for those who use Android 21 times more than the opposite. And the opponent also assessed more positively for the iPhone owner, the rate went towards higher dating.

Also, compared to new smartphone users, 56% of old smartphone users will have less chance of getting an appointment.

Psychologist in Boston (USA), Abby Rodman said that many people may be influenced by the thought that iPhone users often have higher income than Android. Rodman said that many people tend to assess the previous one about financial ability such as what to do, where to go, what to ride, which phone to use . when starting a relationship.

In addition, the Match.com survey also found that 39% of single people have a habit of judging the opponent by speaking, eating badly at 35% and 37% with bad or discolored teeth. Even up to 15% of singles who do not agree to date when they see an opponent using a smartphone with a cracked screen.

Previously, Simon Rego, a study from Albert Einstein Medical University psychologist in New York, has shown that social relationships can be influenced by smartphones. Rego thinks that technology has changed the way someone looks at others.
