In the early days of the internet, digital art, music, and other media were shared freely, with no way to prove ownership or authenticity. To address this problem, some artists and creators started to use digital watermarks or signatures to identify their work. While this helped to some extent, it still didn't provide a way to prove ownership or prevent unauthorized copying and distribution.

### The Birth of NFTs

NFTs were born out of the need to provide a secure and verifiable way to identify and own unique digital assets. NFTs use blockchain technology to create a unique digital certificate of ownership that can be verified and transferred securely. Each NFT represents a unique digital asset that cannot be duplicated.

NFTs can represent anything that has value, like digital art, music, videos, and even virtual real estate.
