A few hours ago, Nintendo suddenly released Nintendo Switch Lite, a compact and cheap version of the Nintendo Switch handheld game console. Nintendo Switch Lite costs about 199.99 USD (equivalent to more than 4 million 600 VND) and will be released on September 20 here.

Nintendo Switch Lite is equipped with a 5.5-inch screen with 720p resolution. Nintendo Switch Lite's battery life lasts from three to seven hours of play, longer than Switch. The device is available in yellow, gray and turquoise colors for users to choose from.

To get such a cheap price, Nintendo has shortened some features of Nintendo Switch Lite. The device will not have a removable Joy-Con handle, but Switch Lite will be a seamless gaming machine, similar to the old Game Boy or Nintendo DS, all in one. However, Switch Lite will still support these Joy-Con handsets via wireless connection.

Switch Lite will be a fully portable gaming device because it cannot play on the big screen like the predecessor Switch because it cannot connect to the TV via USB-C and HDMI. This is in contrast to the half-handheld, half-console version.

Nintendo Switch Lite is still capable of playing all the games in the Nintendo Switch library, but some games will have limitations and disadvantages than the original Switch.

Switch Lite was redesigned by Nintendo to take advantage of Switch's initial success, while attracting new customers who are not enough money to buy a Switch.
