

No software needed, this is the fastest way to transfer images between iOS and Mac devices

There are many ways to transfer photos or screenshots on iOS devices to Mac. For example, you can send these images to email, sync via Dropbox, use a USB cable to connect Mac to iPhone, or use Image Capture application or share via AirDrop.

There are many ways to transfer photos or screenshots on iOS devices to Mac. For example, you can send these images to email, sync via Dropbox, use a USB cable to connect Mac to iPhone, or use Image Capture application or share via AirDrop.

However there is a way to transfer photos from iPhone or iPad to Mac without using any USB application or cable. Please refer to the steps in the following article of Network Administration.

1. All you need

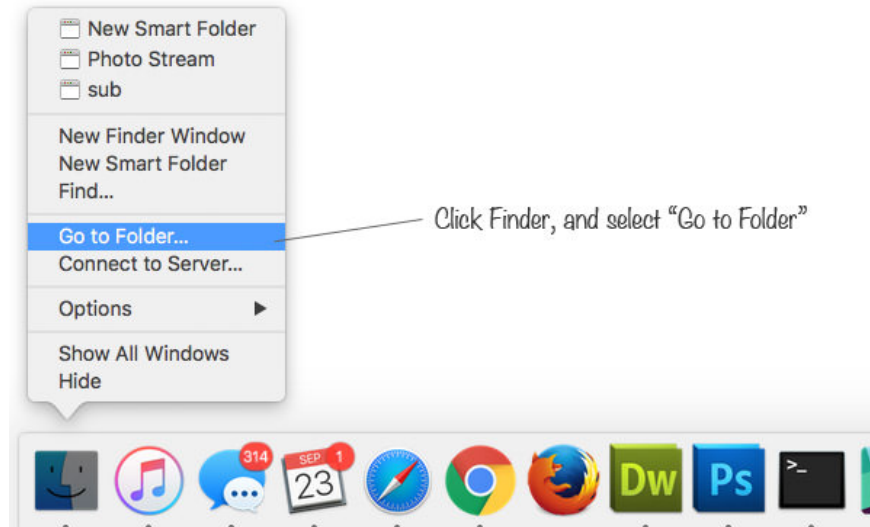

1. Both iOS and Mac devices are connected to iCloud account and an Apple ID.
2. Photo Stream is open on both iOS and Mac devices.
3. Both iOS and Mac devices are connected to the same Wifi network.

2. Steps to take

Although on Mac, the image folder is hidden on the Library folder. However, you can still find and access this folder easily.

Step 1:

Right-click the **Finder on the Dock** , then select **Go to Folder** . Or alternatively, press **Command + Shift + G**.

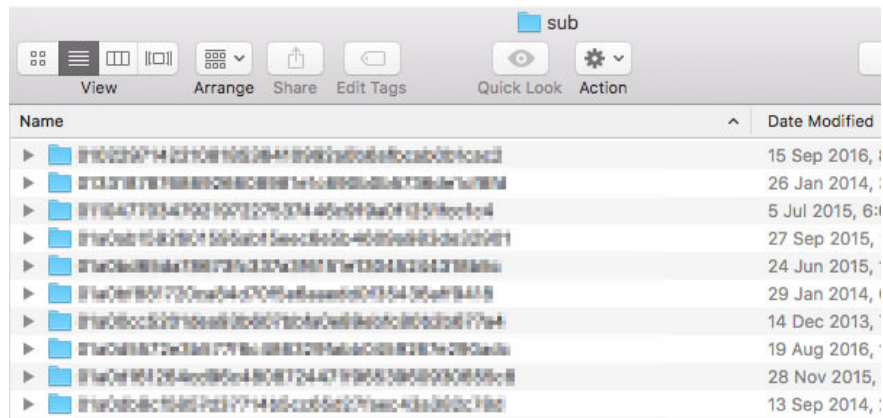

Step 2:

Enter the link below into the **Go to the folder box** and click **OK** :

~/Library/Application Support/iLifeAssetManagement/assets/sub

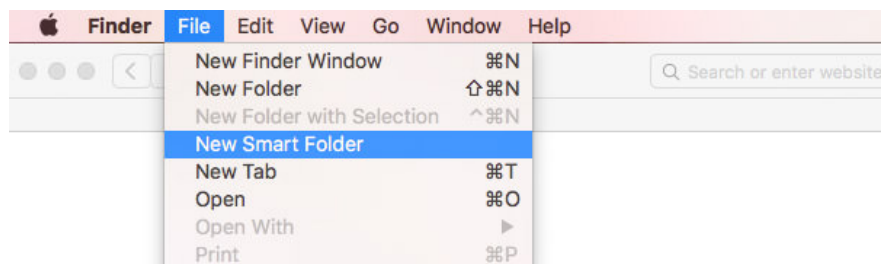

This time on the screen display folder named **Sub** .

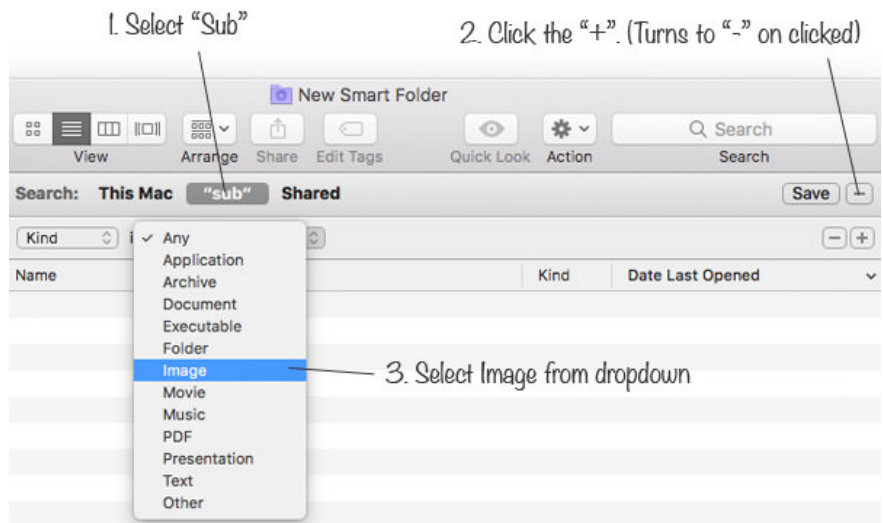

Step 3:

At the Sub folder window, create a new **Smart** folder by clicking the **File => New Smart Folder** .

Step 4:

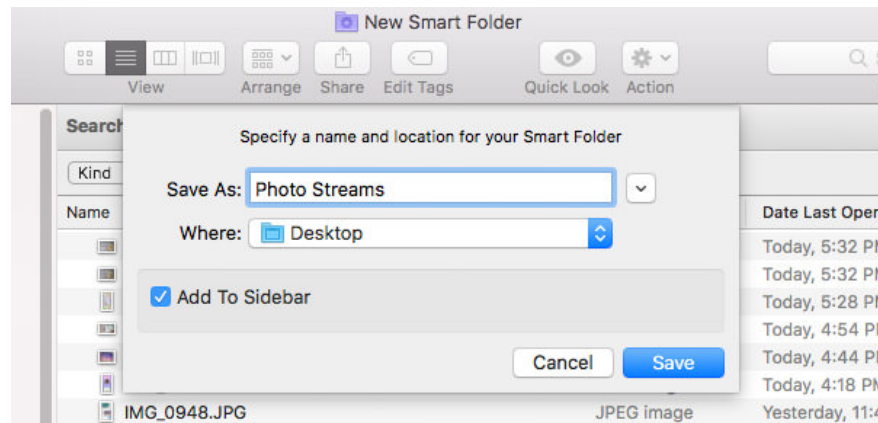

Select the **Sub** tab , then click the + symbol on the right, select **Image** from the **Any** drop-down menu.

Step 5:

Click **Save** . Name it **Photo Stream** or whatever name you want, then select the location to save the folder.

Check **Add Add Sidebar** if you want to display the folder on the sidebar Finder.

All photos on your iPhone or iPad will automatically sync with your Mac, and you can find them on the folder you just created.
