

Nokia 5.3: Snapdragon 665 chip, 4000mAh battery, 4 rear cameras, surprisingly cheap

HMD Global is about to launch its next cheap smartphone, called Nokia 5.3, with many features and very noticeable specifications.

HMD Global is about to launch its next cheap smartphone, called Nokia 5.3, with many features and very noticeable specifications.

Based on a few pictures revealed by NokiaPowerUser, we can see that the cover of Nokia 5.3 is made of plastic rather than glass. This helps manufacturers reduce production costs while ensuring durability of the machine.

Nokia 5.3 is equipped with a 6.6 inch screen with a waterdrop design. The bottom edge has the Nokia logo and the screen border is quite thick.

Nokia 5.3 has a back designed quite fancy with a cluster of 4 cameras arranged in a circle, LED flash in the middle. The rear camera system of the device includes a 16MP main sensor, an 8MP wide-angle camera, a 2MP macro camera and a 2MP depth sensor. The back of the device also has a fingerprint sensor.

About configuration, Nokia 5.3 is equipped with Snapdragon 665 chip. This is a significant improvement because Nokia 6.2 mid-range device is only equipped with Snapdragon 636 chip only. The device is equipped with 3GB / 6GB RAM, 64GB / 128GB internal memory and can be expanded with a memory card. This cheap smartphone is equipped with a battery with a capacity of up to 4,000 mAh.

Nokia 5.3 runs the latest Android 10 operating system.

It is expected that Nokia 5.3 will be launched on March 19 with the lowest price of € 169 in Europe and US \$ 180 in the US.
