

Nokia officially bid farewell to Symbian and MeeGo

After officially relinquishing Symbian and MeeGo, Nokia will stop licensing new developers or updates to these mobile operating systems.

After officially relinquishing Symbian and MeeGo, Nokia will stop licensing new developers or updates to these mobile operating systems.

According to *CNET*, the plan to stop support for Nokia's *Symbian* and *MeeGo* platforms has finally been completed. In a tweet that was recently posted on the official Twitter account, Nokia's Symbian development team officially said goodbye to the two platforms that were once popular for a time and did not forget to say thanks to the support of users over the years.

Not long after announcing its sale of mobile devices and business services to Microsoft, Nokia also announced to developers that by January 1, 2014, they will no longer be able to provide applications. Use or update existing applications in *Nokia Store* for two mobile operating systems, Symbian and MeeGo, and now the company has made this statement. This move is seen as a " *cut off of the past* " to focus Nokia's efforts on Windows Phone and the low-cost Asha line.

" With the business development opportunities on the Asha line and Windows Phone platform, we have reviewed the content of the company's development program to provide maximum support for our developers", Nokia wrote in a notice in October 2013. "And after reviewing, we decided to focus on supporting and investing in developing new content for our Asha line and Windows Phone platform." .

Symbian was once the center of Nokia's success. But because iOS and Android attacked so hard that Nokia encountered many difficulties, so it decided to give up Symbian and MeeGo to focus on Windows Phone. The Asha line, which has been around for many years, will continue to carry Nokia's efforts to dominate markets in attractive developing countries.
