

Non-Internet computers are also monitored by US spies

The NSA has developed a secret technology that can interfere with the radio waves from which to access the victim's computer without the need for an Internet connection.

The NSA has developed a "secret technology" that can interfere with the radio waves from which to access the victim's computer without the need for an Internet connection.

The scandals surrounding the **US National Security Bureau** conducting recent eavesdropping incidents are heated with an information that keeps us all from worrying. If previous eavesdropping cases only happen when a user's computer or device is connected to the Internet, then according to the *New York Times* , even machines without an Internet connection could be victim of this organization.

Derived from a leaked document, the *New York Times* said the NSA has developed a " *secret technology* " that can interfere with radio waves from which to access the victim's computer without the need for a connection Internet connection (*offline*) . Along with eavesdropping software for online installation, this organization has overheard more than 100,000 users worldwide.

According to *Times* , eavesdropping technology even when this computer is offline depends on a peripheral device capable of transmitting radio waves, such as USB or other types of hardware / accessories. Only when these accessories are connected to the victim's computer can eavesdrop. Eavesdropping hardware may be

accidentally plugged in by users, but may also be plugged in by the manufacturer (*computer, accessory*), or an organization. However, the specific identities of participating organizations were not disclosed.

The favorite targets of this NSA's eavesdropping program are often Chinese military units that were accused by *Washington of* having done a lot of digital attacks on the US military. The newspaper said the program also targets Russian military organizations, Mexican police computer systems and drug gangs, European Union trade organizations and allies such as *Saudi Arabia. India and Pakistan* .
