

Norton personalized with Norton One

Because personal computer security is becoming more and more complicated, Symantec recently provided a new protection method called Norton One. Meanwhile, Norton 360 also has an update.

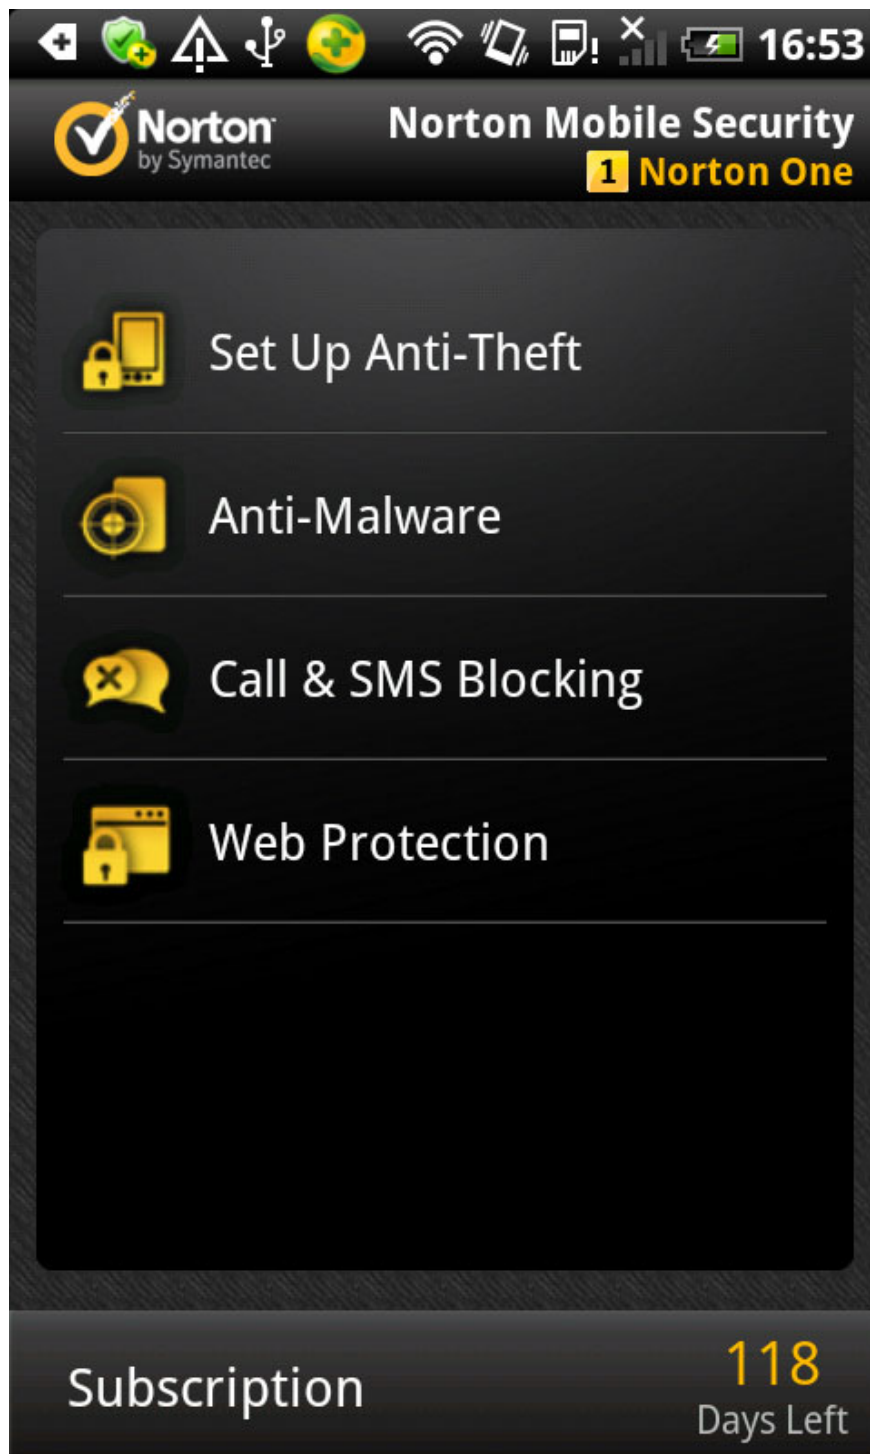

Due to the increasing security of personal computers, Symantec recently provided a new protection method called Norton One. Meanwhile, Norton 360 also has an update.

Symantec's latest attempt to simplify computer security with a personalization-focused method called Norton One, like the latest version of Norton 360, was recently released. Besides, another version also announced is Norton 360, called Norton 360 Everywhere.

Norton One is a completely new product that Symantec hopes to attract people who are not afraid to pay for computer security but still want to experience as simple as possible. Basically, the premium version provides a license key and account ID that can be used for 5 different devices; 25 GB of online storage; Technical support will connect you with a technical support staff of Norton One within 2 minutes; Free antivirus removal by technical staff if your device is infected after installing One; and a web interface to manage everything.

Jody Gibney, head of product management at Norton One, said in a conversation last week: '*We take everything in Norton and help all customers, even non-technical experts. is also accessible*'.

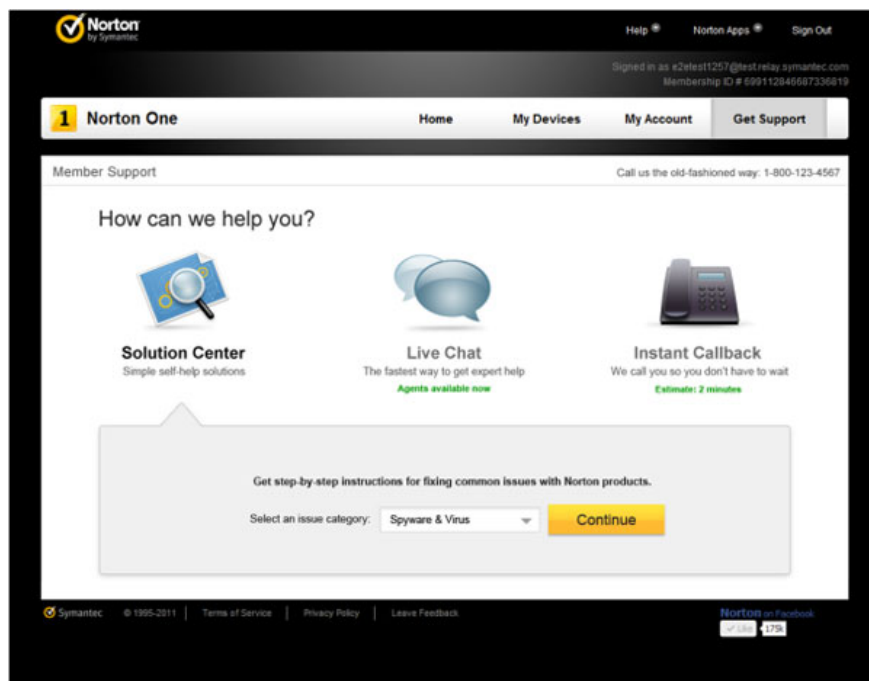

The Android interface also signals when it is connected to a Norton One account.

Devices supported by One can also run Norton 360 v6 or Norton Internet Security 2012 for Windows, Norton Internet Security for Mac, and Norton Mobile Security on Android. Symantec is absolutely right that it is the first industry, and it sounds very much like saving the top seat in the stadium for computer security.

According to Collin Davis, senior director of Symantec, " *One of the highlights of Norton One is that it has a completely new support infrastructure .*" This means each user will receive one. Private installation link via

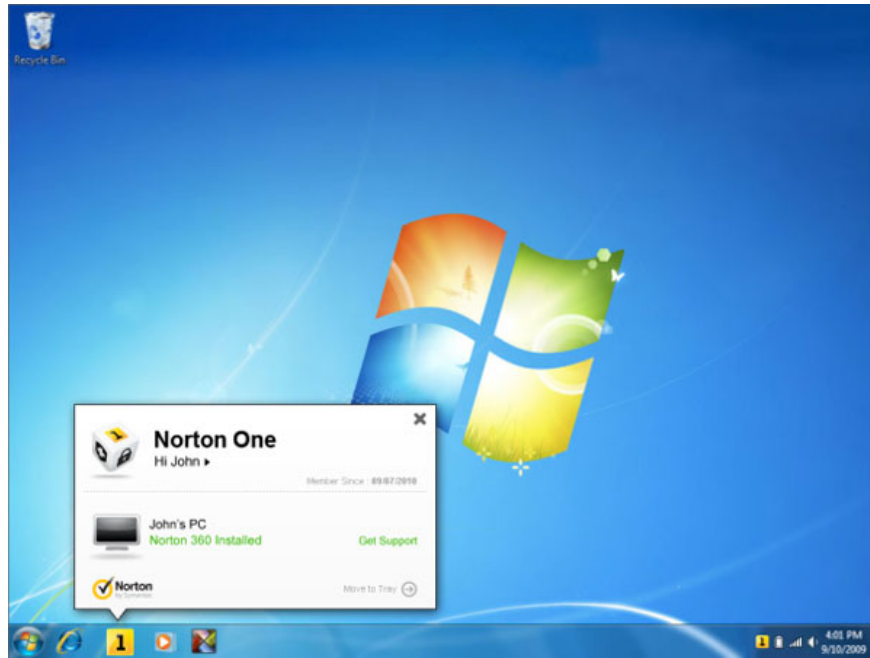

email This link already has license key information in it so users do not need to fill in anything. A more traditional installation path is also provided for those who need them. .

Norton One plans to provide user support automatically, including callback time within no more than 2 minutes.

Davis said: ' People always want to own a solution as automatically as possible, and something can help them not to touch each time they need it .'

Symantec also announced the annual update of Norton 360, and revealed information about the second version of 360, which is due to be released this spring, called Norton 360 Everywhere. Norton 360 Everywhere will expand Norton 360's features for Mac and Android devices, and provide a single web interface to manage them. Norton 360 version 6 delivered updates from last fall to Norton Internet Security 2012, such as Download Insight and bandwidth management for updates. New features include a new interface to transfer backup interface, sync in Norton's Identity Safe, and Identity Safe toolbar.

Norton One works discreetly but continuously in Windows. There is no news about integrating with Windows 8 yet.

Norton One is currently only testing software with certain limitations. It will be available for \$ 149.99 for 5 devices, with additional options available upon request. When offered extensively at some point in the spring of this year, it is available only in English-speaking countries: the US, Canada, Britain, Ireland, Australia and New Zealand.

Norton 360 v6 currently has a price of \$ 89.99 with 2 GB of online storage. If you add \$ 10, you will get 25 GB of storage. Symantec has not disclosed the price of Norton 360 Everywhere or when it officially launched.
