

Notes when choosing online photo backup service

In the past, to store photos, we often had to copy them to CDs and computer hard drives. However, this way has a high probability of losing photos if the CD or hard drive is unfortunately damaged. Therefore, online photo backup services have provided convenient image storage solutions, but completely free. Currently, there are many different online photo hosting services, how to choose for yourself the most suitable service. Please refer to the article below.

In the past, to store photos, we often had to copy them to CDs and computer hard drives. However, this way has a high probability of losing photos if the CD or hard drive is unfortunately damaged. Therefore, online photo backup services have provided convenient image storage solutions, but completely free. Currently, there are many different online photo hosting services, how to choose for yourself the most suitable service. Please refer to the article below.

1- Balance of free service packages

Unlimited Photos

When you sign up you will download the desktop app to easily upload all of your content.
[Start your 3-month free trial](#)

By clicking to start your free trial, you agree to the [Cloud Drive Terms of Use](#) and authorize us to charge your 1-Click credit card or another credit card on file the plan price (plus applicable tax), beginning at the end of your free trial. Your plan will automatically continue until you set it to not renew in Manage Storage.

All online backup services provide a free (free space) storage package for new users. However, each service has a different high level of free depending on the business strategy to encourage users to spend money to buy more storage space. Therefore, please take a moment to compare and choose the service with the highest free capacity to choose in order to avoid a cost of upgrading later.

2- Select image format

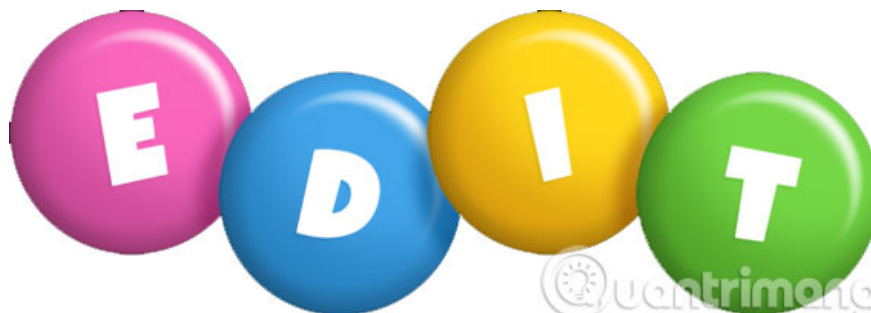

If you only want to back up JPEG, GIF or PNG images, there is no need to pay much attention to this criterion because all services support these formats. However, if you want to save the PSD (Photoshop), TIFF or RAW image files, you must study them carefully before registering to use.

3- Speed ??and ability to consume the application's memory

Many services have very slow upload speeds, which makes the device run out of battery quickly and take time to wait. So, learn about the upload speed of the services you want to use so you don't want to be annoyed. In addition, some desktop or mobile applications of service providers have high memory consumption, which causes the device to hang, even turn off suddenly . So, you need to consider Device configuration to select the appropriate service. Typically, applications with the function of automatically uploading photos will consume a lot of system resources.

4- Services to support image management and editing

You will be frustrated with photo backup services but do not have the function to manage or edit photos. Therefore, choose services that support more functions for images such as viewing thumbnails (thumbnails), quick editing, photo gallery management .

5- Multi-platform support

Most users of mobile devices now expect their images to be backed up safely. Therefore, when choosing an online backup service, choose the provider that has the application for as many mobile platforms as possible. You should prioritize the service with multi-platform backup utility, from Windows, OS X to iOS, Android and Windows Phone so you don't have to worry about "incompatibility" later.

Good luck!
