

## October will have netbooks using Samsung's Atom chips

The netbook market became even more exciting after Samsung announced it would launch a 10-inch mini computer using Atom processor to compete with other competitors.

**The netbook market became even more exciting after Samsung announced it would launch a 10-inch mini computer using Atom processor to compete with rival Asus, Acer .**

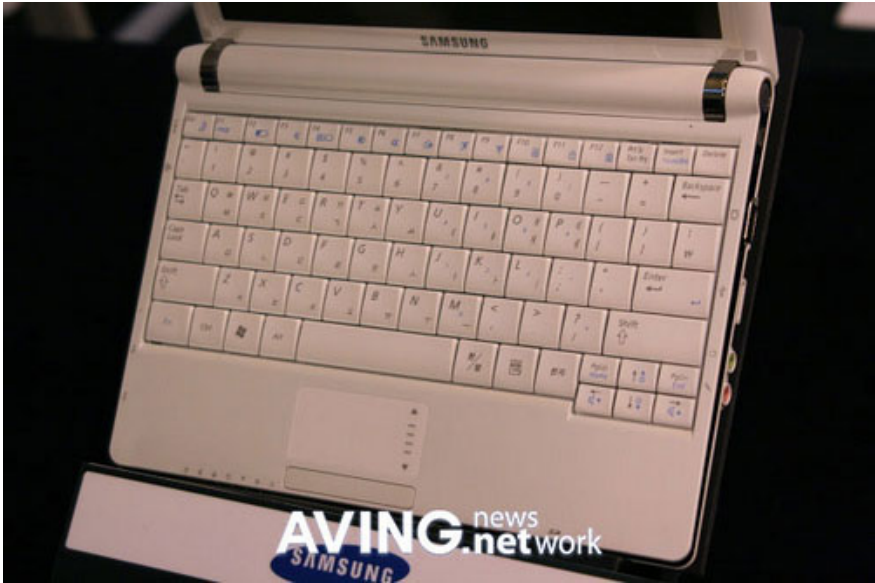

In terms of features, Samsung's netbook has nothing to stand out from computers already on the market. It has a 10-inch screen, 1,024 x 600 resolution, also has a USB port and VGA port.

In terms of design, netbooks seem to be more elaborate, the keyboard is quite wide - promising to create a comfortable feeling for users when using.

There is not much information about this netbook and the price is not published.

A few first images of Samsung netbook:
