

Official Google Lens is updated for all Android smartphones

Google Lens is a feature that helps virtual assistant Google Assistant to scan images and search for relevant information.

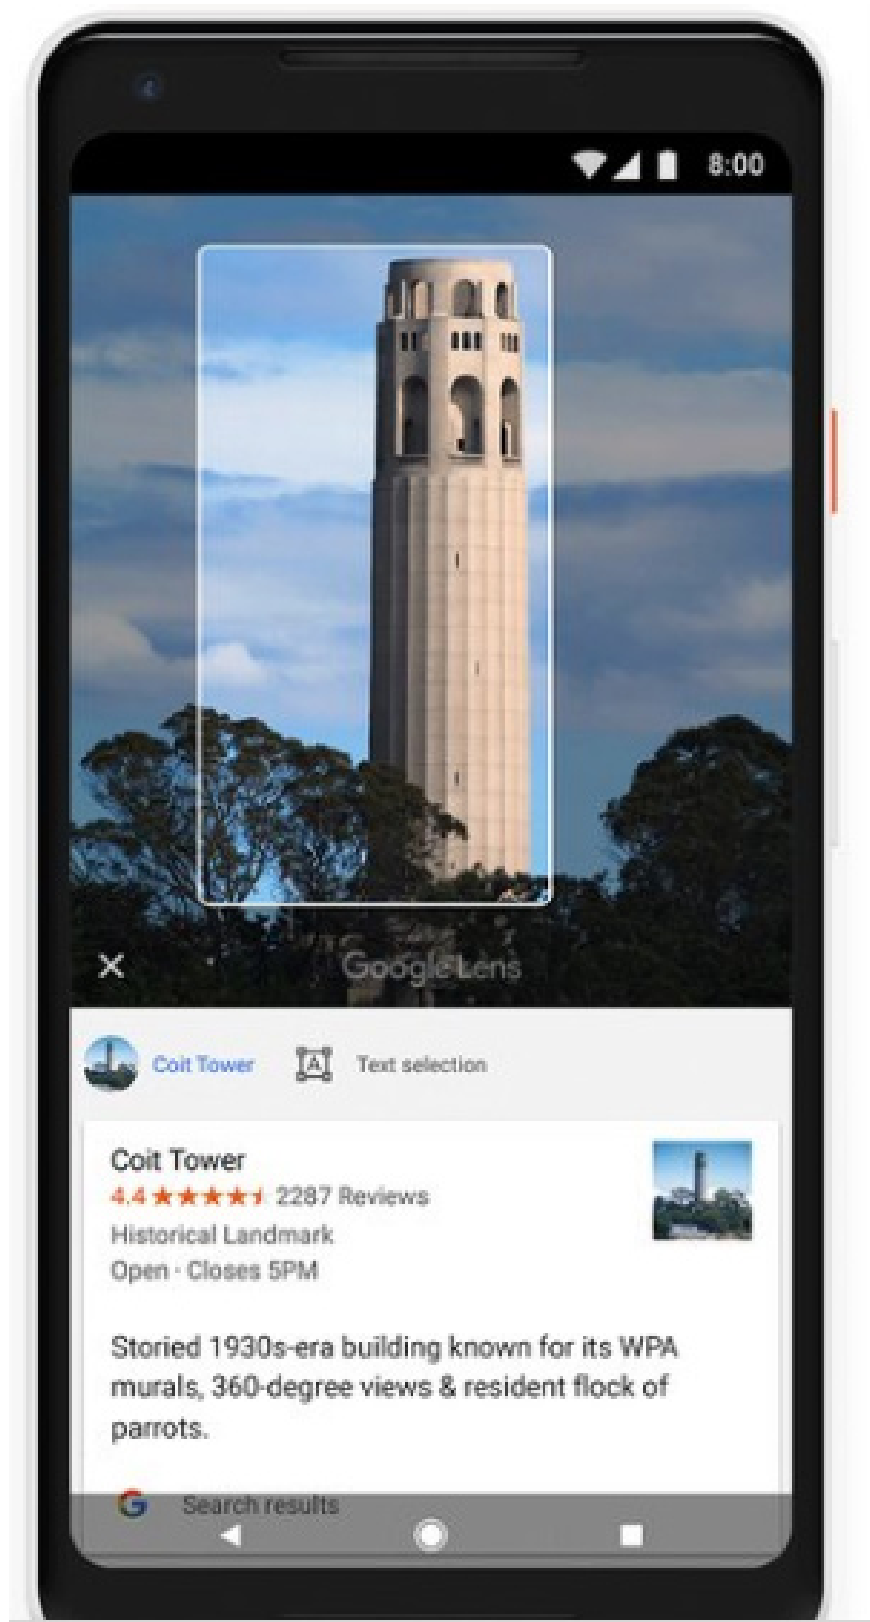

Google Lens is a feature that helps virtual assistant Google Assistant to scan images and search for relevant information. This is a very useful feature but it was only available on Pixel smartphones before.

After a year of debut since the Google I / O event last summer, the Google Lens feature was finally officially updated for all Android smartphones via the Google Photos app.

You can download the free application and view Google Photos photos for the latest version from the Play Store store.

After installation, you can use the Lens scanning feature to find information about them such as scanning images of a famous architecture to search for related historical events, scanning a book cover. to display reviews . Or you just need to use the rear camera and head to a router to automatically connect to Wi-Fi or scan the sign of a store, to receive reviews and can book a table first .
