Improved BitDefender 2011 version for friendly interface, highly customizable, superior fast scanning speed, suitable for the needs of Vietnamese users.

Complete BitDefender 2011 product suite.

On October 6, 2010, BitDefender Vietnam officially launched the 2011 security software suite including: Antivirus Pro 2011, Internet Security 2011 and Total Security 2011. Continue to improve the quality with modern technologies - which is the traditional advantage of BitDefender, the 2011 version is improved to have a friendly interface, highly customizable, superior fast scanning speed, suitable for the needs of Vietnamese users.

Outstanding improvements in scanning speed and processing technology

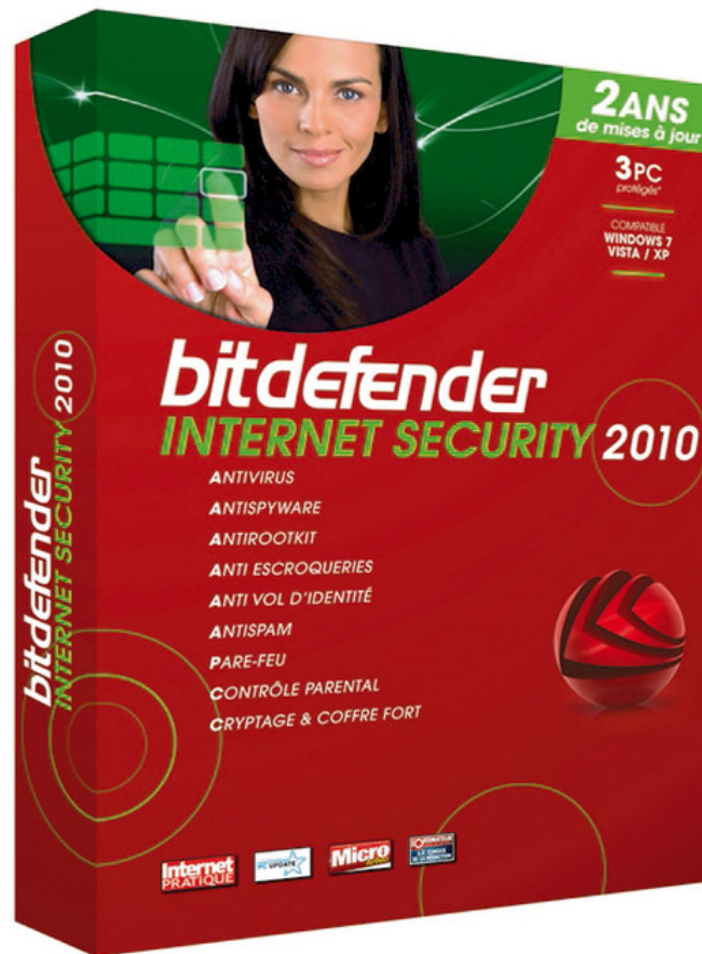

For the first time, the BitDefender 2011 product interface is user-friendly in blue, allowing users to choose the interface that suits their security and usability needs. Basic, intermediate or expert users can actively choose the data processing speed and features that best match the work and power of your computer. Accordingly, each BitDefender security product package provided in version 2011 is suitable for different customers:

* BitDefender Antivirus Pro 2011 is suitable for individual customers, providing fast, proactive protection against the latest viruses, spyware and personal information theft attacks. They all manage through a highly customizable, user-friendly interface. As soon as it debuted in the world last August, this package has been at the

top position in the top 10 security products of the year.

* BitDefender Internet Security 2011 is suitable for home users, providing protection for home Internet connections, against Web-based attacks, providing better performance, higher security for games online. Products that help parents control their children's Internet use process effectively. BitDefender Internet Security 2011 after launch is the most downloaded security software on www.download.com

* BitDefender Total Security 2011 is suitable for business customers. It provides comprehensive security solutions against viruses, spyware, phishing and private information theft attacks. Total Security 2011 is the solution package that includes antivirus, firewall, network management tools, file encryption, online backup, and automatic hourly updates. The product BitDefender Total Security 2011 was honored to head the comprehensive security test of PC Security Lab. This test is conducted on 31 products, with famous names such as BitDefender, Symantec, Kaspersky, Avira, Panda . With the final score of 99.45, BitDefender Total Security products are in the leading position.

Highlights 'active guessing technology'

BitDefender is a pioneer in the " *active guessing technology* ", with 160,000 security sensors located in 110 countries, creating a multi-layer security system. Accordingly, the outstanding features of the 2011 security product line from this European technology can be mentioned as:

- *Rocket Scan feature* : Proactive guessing technology B-HAVE allows computer scanning with superior speed compared to current security software.
- *The interface is redesigned and streamlined* . Users can install and set up BitDefender 2011 in one step, no need to restart the PC. This feature helps the product save maximum time for users.
- *The 'Search Advisor' tool* warns you about unsafe websites in Google, Yahoo, Bing search results ., by checking each link in BitDefender's online database.
- *A guide to resolving firewall problems* (Firewall Troubleshoot Wizard) and resolving the most common Internet-related problems, printers or office controls via remote connections.
- *Performance optimization tool (Performance Optimizer)* will show the processes that are slowing down the system and how to fix them. The level of protection will adapt to the processing power of the computer by adjusting the settings to match the memory and CPU.
- *Smart schedule* helps the system achieve maximum performance, through analysis of application resource usage requirements.
