

# OnePlus 13 Mini will have dual 50MP camera with novel design

OnePlus 13 Mini will have a redesigned camera along with upgrades to internal hardware quality.

OnePlus is preparing to launch a new smartphone model called OnePlus 13 Mini, belonging to the OnePlus 13 product line. Recently, there has been a lot of leaked information about this device, and recently, a source from famous leaker @DigitalChatStation has revealed interesting information related to the camera system of OnePlus 13 Mini.

Previously leaked images of the OnePlus 13 Mini design.

According to the shared information, the OnePlus 13 Mini will be equipped with a dual camera system on the back with a novel design. Specifically, the device will have a dual camera setup in the form of a bar, different from previous leaks that the device will have three cameras.

However, this is in line with the new design trend that OnePlus is applying to its products this year. The main camera will have a resolution of 50 megapixels, combined with a 50 megapixel telephoto lens, allowing for 2x optical zoom.

In terms of configuration, the OnePlus 13 Mini will be equipped with a Snapdragon 8 Elite chipset, a 6.31-inch LTPO OLED screen with 1.5K resolution and a 120Hz refresh rate. The design of the device will stand out with a metal middle frame and a glass back, along with an optical fingerprint sensor integrated under the screen.

Although OnePlus has not officially confirmed the launch date, according to Gizmochina, the OnePlus 13 Mini is likely to be introduced in the second quarter of this year.
