

OnePlus is cherishing a phone with a unique hidden camera

OnePlus - one of the most appreciated high-end smartphone manufacturers today, is cherishing the idea of ??a hidden camera smartphone.

As the configuration gradually became saturated, the design did not have many innovations, the camera emerged as the most concerned aspect on smartphones. Not only is it racing about the number of dots, the number of sensors or the ability to take photos at night, even the design of the camera cluster is also very noticeable.

OnePlus - one of the most appreciated high-end smartphone manufacturers today, is cherishing the idea of ??a hidden camera smartphone. If you do this, smartphones will now have a more seamless and beautiful design.

Specifically, information leaked from a new patent registered by OnePlus has described quite clearly about the phone capable of hiding the front and after camera sensor not in use, with the implementation mechanism is not too complicated. magazine.

Looking at the image above, it can be seen that this smartphone looks quite similar to the OnePlus 7T model, with the camera cluster placed in a circular area, but the lenses will be aligned vertically instead of horizontally. In charge of hiding the camera when not working, it will be plastic, glass, or metal lid, which can open and close automatically, and will most likely have a uniform design with the back.

The mechanism to hide this camera cluster is not complicated, we have seen on digital cameras that appeared many years ago. It will help protect the lens from scratches and dirt, or may also act as a privacy feature.

In addition, the patent also shows that the device will own a monolithic screen, 'infinity', which means that there will be no appearance of the front camera assembly, indicating that it will probably be hidden below the screen. . In fact, Oppo, the brand that belongs to the same group as OnePlus, has tested the camera under the screen, so it will not be surprising if high-end OnePlus phones also have this feature.

Of course this is just a patent and its practicality is still a big question mark. However, the emergence of new initiatives is always essential in any field.
