

Online anti-malware tool

You may need to use a utility that can detect, update and process malware automatically. All are available in the latest Malware Radar system provided by security vendor Panda.

You may need to use a utility that can detect, update and process malware automatically. All are available in the latest Malware Radar system provided by security vendor Panda.

This comprehensive solution includes a service for collecting and analyzing signs generated by malicious code and moving to a security center server. From there all information is analyzed, identifying malicious programs secretly inserted into customers' computers to provide exclusion measures.

Currently, Panda's database has stored over 2 million samples of malware. In particular, this service is capable of detecting and processing computers even if the network bandwidth is limited. The trial version is available here.
