

Online backup

You do not need to worry about losing data every time you reinstall the operating system or it is inconvenient to back up (back up) data to your hard drive, CD and take it with you when traveling. Thanks to the advent of online backup services, you can now get data wherever you go.

You do not need to worry about losing data every time you reinstall the operating system or it is inconvenient to back up (back up) data to your hard drive, CD and take it with you when traveling. Thanks to the advent of online backup services, you can now get data anywhere online without bringing anything.

Ms. Thanh Thuy - PR staff of a hardware components distribution company - is very sad because the entire list of customers, plans and reports made during the year lost all smoothness. Cause, the natural network administrator excitedly scanned the virus, cleaned up the computer, reinstalled the computer to lose data of some people in the company. More dangerous, including the machine of the director. During the morning, the boss's criminal face made everyone unable to say a word.

Everyone has an important repository of data to store. It is not necessary to be a document in the new job, but the image files, movies, songs, address lists, memo books . are also valuable assets.

Many users have experienced pain every time they have to reinstall the computer or the hard drive is damaged, so they start backing up the data. Of course solutions such as burning to disk, copying to another hard disk are quite convenient but limited when not accessible to you from other locations. This is also the reason for the idea of ??online backup service.

What other online backups do regular backups?

These two types of backups have several similarities. Online Backup also creates a backup copy of all your important data and stores it in a separate place. So when something goes wrong, you can quickly restore the system and continue working. Backup data includes documents, image files, movies, music and even important software of the system (operating system, specialized processing software). If the direct backup solutions have the advantage of speed, online backup offers more convenient advantages

First of all, online backup allows you to access data from anywhere via an Internet connection. You don't need to stick with a hard drive or optical disc bag when working or working far away.

Next, the data security and preservation is a company that provides management services, so it is often much more professional and reliable than personal methods.

In addition, because the data is backed up in many parts of the world, natural disasters or electrical incidents in the area will not be able to completely lose your data.

My best friend used the online backup service several times and still joked that if you save important data in a hard disk and put it in a cabinet, the thief hugs the whole cabinet, the data is gone too . But when you store data online, it's like you save it in an invisible place, no matter what your property is safe.

Although online backup has many advantages, there are two main risks: Backup speed and sensitive data security. Back up to a CD or hard disk is a bit inconvenient, but only you know when you use the online backup service, the service provider is the one who holds your information. If the service provider wishes to disclose your personal information, it will be a hassle, especially for free services. So if you are planning to back up data that is very important and vital to the company, you should use a backup online service that costs money. Of course, the free service is still welcomed by the vast majority of users in the IT community, especially for students, students and home users, but security is not high.

Market bustle is free and free

In the context of the booming broadband connection, dozens of brands of online storage services have appeared with all kinds of different types, with free and paid fees included with many types of promotions. exciting. The problem when you decide on the type of service is not a good service, but what service suits your needs.

Currently there are very few providers that only provide users with a type of service that most allow you to choose between free and paid use, to receive certain benefits depending on the amount. let go.

For free service packages, users usually only get basic uploading or downloading features like an online storage (Storage), but cannot be called backup yet. Some services may provide additional features such as file sharing (Media Max service) or storage of information even when mistakenly deleted (I-Backup service). Most services have software support for users to use directly on the computer with a minimum capacity of 1 GB to a few dozen GB as Media Max allows up to 25 GB.

However, the weakness of these free services is that they often end up with advertisements or sign-ups because the online backup is under the control of some big giant like AOL's X-Drive. In addition, the paid service groups apply 'any of their money, pay as many services as possible'. With levels from a few dollars per month to hundreds of dollars, you will enjoy the level of comfort and pretty rich options corresponding. Paid service

allows backing up from data to system information (mainly in high-end service packages) periodically or at your discretion.

For users who are small and medium sized entrepreneurs or commercial organizations, some online backup service providers can assist in signing contracts for long-term work and transition cooperation. more karma. However, perhaps this service is not really effective in Vietnam because businesses are still familiar with traditional backup types. The playing field of the major types of online backups still only serves as a transfer station or secondary data warehouse for single users only.

Ten popular online backup services

In fact, there is no online backup service that dominates the current Internet, each service has its own advantages and disadvantages. Choosing a suitable type depends entirely on the needs of the user. Here are ten of the most popular services available online.

1. Mozy (www.mozy.com): This service is quite attractive and unique because it allows to use up to 2 GB of data storage space for free in the first few months. For only 4.95 USD per month, you will be able to use up to 30 GB.

2. X-Drive (www.xdrive.com): X-Drive is one of the first online backup services that has been popular with many users because it offers many good features, such as Periodically save, manage online data in a direct manner and most importantly allow data sharing with password protection.

3. I-Backup (www.ibackup.com): I-Backup has many similarities with X-Drive and has many interesting features. You can download files that have been mistakenly deleted within 10 days, make full backups or make additional backups. I-Backup even supports Apple's computer system, which Xdrive does not have.

4. Acpana Data Deposit Box (www.datadepositbox.com): This is the cheapest solution online for users who do not want to spend too much money on online backup. Acpana also allows for enhanced data storage over time.

5. Connected DataProtector (www.connected.com): This service provides software Heal Wizard that allows you to restore the system (similar to System Restore in Windows XP). In addition, the service also has data protection features such as encryption or file backup in high security mode.

6. MediaMax (www.mediamax.com): Formerly known as Streamload, the service allows you to use up to 25 GB of free storage and many other attractive features. However, you can only download 1 GB per month and send others files up to 10 MB in size.

7. Backup.Com (www.backup.com): This is a fee-based service with many prices for users to choose, suitable for all users and respond well to different purposes.

8. AmeriVault (www.AmeriVault.com): AmeriVault is one of the most expensive online backup services today. However, the service provides many important features such as email storage, real-time backup and allows users to design backup / restore solutions at will.

9. Online-backup (www.onlinebackup.com): This service provides backup software for users to use on their machines, there are many types of backup plans depending on the volume of data.

10. Copycloud (www.copycloud.com): Copycloud is also one of many cheap services today. The main weakness of the service is to only allow backup from a single computer. Normally, users can only get basic uploading or

downloading features like an online storage (Storage), but cannot be called backup yet. Some services may provide additional features such as file sharing (Media Max service) or storing information even when deleted.
