

# OpenAI artificial intelligence defeated the current world champion Dota 2

The recent OpenAI Five artificial intelligence has shocked the world by defeating the OG team in a match 3 with a convincing 2-0 score.

The recent OpenAI Five artificial intelligence has shocked the world by defeating the OG team in a match 3 with a convincing 2-0 score.

It is worth mentioning that the 5 boys of OG team just won the championship of The International, with a prize of 11 million USD after overcoming the 15 most powerful Dota 2 teams in the world.

OpenAI's OpenAI Five system has been trained with a processing speed of 800 petaflop / s for a period of 10 months. This period is equivalent to 45,000 years that a gamer practices continuously in practice.

In this match, OpenAI Five has a number of advantages, that is, the OG team cannot use the skill of calling or creating ball because the AI has not yet learned and only select 17 out of 100 Dota 2 generals.

Even so, OpenAI Five, with its active play, took the first advantage and the snowball made OG players unable to keep up, still had a convincing victory over the OG team.

OpenAI Five self-taught Dota 2 through self-playing loops, not taught how to play. This victory of OpenAI Five proves that artificial intelligence can self-learn through self-correction.

OpenAI said it will open the door so that all Dota 2 players can experience and try with this artificial intelligence from April 28 and last for 3 days. If you want to try it, you can click on the link below to register.
