

Opera 10 integrates Opera Turbo technology

After developing a trial version of Opera 10 for desktop computers, Opera recently introduced this new version of the new technology - Opera Turbo

After developing a trial version of Opera 10 for desktop computers, Opera recently introduced this new version of the new technology newly researched and developed by Opera Turbo .

The way Opera Turbo works is that it will retrieve the data of the website users need to access and transfer them to Opera's server system. Here, the server's job is to compress the site data, then move to the browser to make the data lighter. This will help Opera 10's web browsing speed be much faster than previous versions.

In addition to Opera Turbo technology, Opera 10 also improves the performance, fixes the upload errors, especially these problems often occur with gmail, the ability to check spelling is enhanced. , add some scripts to the installation file, improve the reporting capabilities (version for Linux).
